NOTE: This report summarizes the information on pesticide use as reported by the farmers/operators surveyed. The data do not imply endorsement of any particular product or practice. Also, some responses may have misreported use of pesticides due to similar-sounding chemical or trade names. In some cases, pesticides are approved for use before planting or after harvest, but not to a crop. The mention of an unregistered pesticide applied to a crop does not imply applications are legal or advocated by the authors. It is of the utmost importance that pesticide users read, understand and follow all label directions and precautions.

INTRODUCTION

This is the eighth major account of pesticide usage in North Dakota and describes pesticide usage on agricultural land in 2008. The information is derived from a comprehensive survey of North Dakota farm operators. The first seven comprehensive surveys to assess pesticide usage on major crops in North Dakota were conducted on 1978¹, 1984², 1989³, 1992⁴, 1996⁵, 2000⁶ and 2004⁷ pesticide applications.

Total acres treated with herbicides, insecticides, fungicides, and desiccants were 16,081,700 in 1978¹, 20,600,300 in 1984², 19,527,400 in 1989³, 19,034,200 in 1992⁴, 20,668,100 in 1996⁵, 19,087,900 in 2000⁶, 22,572,300 in 2004⁷ and 32,608,400 in 2008 (Table 1). Increase in soybean aphids and wheat diseases (leaf rust, tan spot and scab) may contribute to the increase in acres treated. Changes in pesticide-treated acres also may be due to pest outbreaks, changes in pest populations, tillage practices, substitution of nonchemical for chemical methods, shifts in acreage of major crops or new developments in pest control technology.

The survey of pesticide usage during 2008 in North Dakota was conducted because regular assessment of pesticide usage is an important indicator of changes in farming practices and farmer attitudes toward pesticides, as well as an indicator of the relative severity of various pests in the state.

The specific objectives of the survey were:

1. identify acreage of crops treated with each pesticide group, and identify specific pesticides used.
2. determine pesticide usage by state districts.
3. determine the percentage of pesticides applied by farm operator or custom applicator by air or ground equipment.
4. determine extent of use of several nonchemical pest control methods.

METHODOLOGY

North Dakota State University; USDA, National Agricultural Statistics Service, North Dakota Field Office (NASS); and the North Dakota Department of Agriculture designed the survey instrument. As in previous surveys, pesticide use data for wheat, barley, oat, corn, soybean, dry edible beans, dry pea, lentil, sunflower, safflower, flax, canola, mustard, sugarbeet, potato, alfalfa hay, other hay, CRP, fallow and pasture were requested for the 2008 crop year.

NASS was responsible for implementing the survey. The survey was conducted as a phone survey. NASS selected a sample population of 7,000 farm operators to represent each crop at the district level. The target for useable surveys was 3,500 responses, stratified across NASS's reporting districts. After selection of the sample population, a presurvey letter was mailed to alert selected growers of the survey effort and content. Interviews were conducted from late January through March 2009.

The Questionnaire

The questionnaire was designed to collect pesticide data for major and minor crops, summer fallow, CRP and pasture in North Dakota for the 2008 crop year. The questionnaire was similar to those used previously. Information on individual crop total acres seeded, acres seeded with any treated seed and acres seeded with farm-treated seed was obtained. Acres treated by crop were determined for the general pesticide categories of herbicides, insecticides, fungicides and desiccants.

Pesticide usage data included the active ingredient used, acres treated, number of applications, type of applicator and method of application for each major crop or land use identified by respondents in Section 1 of the questionnaire. The type of applicator meant the chemical was self-applied by the farm operator or custom applied. The method of application referred to aerial or ground applications.

For the pest management decisions and practices, questions were developed to query whether respondents scouted for pests, information they used to make treatment decisions, whether they used nonchemical methods of pest control, their intended GM crop usage and Internet use as an information resource.

The Sample

A sample of 7,000 farm operators was selected at random from the USDA National Agricultural Statistics Service (NASS) list of farm operators.

Data Collection and Editing

Telephone interviews were conducted from late January through March 2009. A total of 3,510 usable surveys was obtained.

Of the producers surveyed for 2008, 41% grew wheat, 17% barley, 9% oat, 20% corn, 19% soybean, 4% dry bean, 5% field pea, 1% lentil, 9% sunflower, 0.3% safflower, 5% flax, 7% canola, 0% crambe, 0.3% mustard, 2% sugarbeet, 0.2% potato, 29% alfalfa, 25% other hay, 38% CRP, 38% pasture and 3% fallow. These values are similar to the 2004 survey except fallow was used by 14% of the producers surveyed in 2004 as compared with 3% in 2008.

The data review process looked at completeness and reasonableness of data within each section of the questionnaire and across sections. For example, the acreage treated with herbicides reported in the first section of the questionnaire was compared with the total herbicide-treated acreage reported in Section III for each crop.

The Summary

All percentages at the state level shown in the summary tables are weighted averages of the districts. Data were summarized by obtaining a percent of total acres treated for the general pesticide category, as well as for specific chemicals, by crop, and by crop reporting districts. These percentages of total acres treated were multiplied by the NASS estimate of total acres planted to each crop in the district. State acres were obtained by the addition of these data with state percentages derived to obtain the weighted figures.

All results from the questionnaire were included in the summary tables. Items designated as “.” represent no data reported.

Statewide Pesticide Usage for North Dakota

The reported pesticide-treated acres in Tables 1, 2 and 3 indicate acres that received one or more applications of a pesticide. The treated acres in pesticide usage Tables 4 through 32 include multiple applications to the same acreage as separate values in the total, and pesticides applied as a tank mixture were totaled separately unless a commercial premix was used. Thus, acres treated in pesticide Tables 4 through 34 can exceed 100% of the planted acres. See list of tables.

Herbicides, insecticides and fungicides applied one or more times (Table 1).

	Herbicide	Insecticides	Fungicides
----- million acres -----			
2008	21.4	4.0	5.9
2004	19.3	0.9	2.1
2000 ¹	18.1	0.3	0.7
1996	18.7	1.3	0.6
1992	17.6	0.9	0.6
1989	17.4	1.8	0.4
1984	17.5	2.5	0.5

¹without sugarbeet and potato

Pesticides applied to approximately 54.9% of all combined crop, pasture, hay, CRP and summer fallow land (Table 1).

	Herbicides	Insecticides	Fungicides
----- % of land -----			
2008	54.9	10.3	15.1
2004	48.6	2.4	5.4
2000	47.3	0.8	1.9
1996	47.3	3.2	1.6
1992	43.1	2.1	0.4

Total acres planted to treated seed (Table 1):

2008	12.1 million
2004	8.5 million
2000	7.8 million
1996	9.8 million

Total treated seed (Table 1).

	2008	2004	2000	1996
----- % -----				
Wheat	43.6	35.0	33.5	45.3
Barley	49.2	42.1	39.6	50.9
Corn	92.8	81.1	73.4	79.4
Soybean	55.9	31.4	17.9	9.5
Dry bean	90.9	84.8	63.2	84.3
Sunflower	92.1	82.4	78.9	76.5
Canola	80.0	87.7	81.6	76.2

Total acres planted to on-farm treated seed (Table 1):

2008	4.6 million
2004	3.5 million
2000	3.9 million

On-farm treatment is most common for seed of potato, wheat and barley. Seed of corn, sunflower, canola and dry bean generally is purchased treated.

Total acres applied at least once (Table 1) or multiple times (Table 31) with herbicides.

	Herbicide	
	Treated at least once	Treated multiple times
----- acres -----		
2008	21,364,800	41,106,800
2004	19,284,900	36,768,700
2000	18,434,430	31,480,330
1996	18,765,000	33,691,700
1992	17,573,200	28,777,400
1989	17,368,600	27,674,700
1984	17,539,800	24,819,300

Percentage of acres treated at least once with herbicides in 2008 (Table 1):

>90% wheat, barley, corn, soybean, dry bean, field pea, sunflower, flax, canola and sugarbeet

<3% alfalfa hay, other hay, and pasture.

Treated summer fallow acres was 36%, which was down from 44% in 2004.

Insecticides were used on 4 million acres of the surveyed crops in 2008 (Table 1). This is more than the 0.93 million in 2004, but less than the 6 million acres in 2000 (with NASS-estimated potato and sugarbeet acres), but more than the 1.26 million acres treated in 1996. More than 10% of the surveyed crop acres were treated with an insecticide. Potato (70.5%), sunflower (60.5%), soybean (57.9%), sugarbeet (44.3%) and lentil (24.7%) had the highest percentage of insecticide-treated crop.

Total acreage treated with fungicide, exclusive of seed treatment, increased to 15.1% of the surveyed acres treated in 2004 (Table 1) compared with 5.4% in 2004, 1.9% (without sugarbeet and potato) in 2000, 1.6% in 1996 and 1.4% in 1992 of total cropland treated at least once. The most frequently treated surveyed crops were sugarbeet and potato at 83.3% and 79% of acres respectively. Wheat, barley, and dry bean showed a significant increase at 40.8%, 32.7%, and 39.9%, respectively. In 2000, 99% of sugarbeet and 96% of potato acres received a fungicide application but only 6.2% of the wheat acres were treated.

Table 1. Acreage planted, acreage treated and percentage of planted acreage treated with pesticides in surveyed crops, North Dakota, 2008.

¹ Preliminary estimates by the National Agricultural Statistics Service with the following exceptions: Pasture acreage was taken from the 2007 census. Acreage for mustard, safflower, crambe, summer fallow and CRP were taken from Farm Service Agency data.

² Multiple applications to the same acreage were totaled as one application within a pesticide group, . = no data reported.

2008 PESTICIDE USE AND PEST MANAGEMENT PRACTICES STUDY

January 16, 2009

Dear North Dakota Farm Operator:

Managing pest problems in agriculture is a challenge you face every growing season. Your background in handling these demands is unique. When it comes to pesticides in agriculture, much of the controversy over their usage is fueled by misinformation. It is vitally important that current, accurate pesticide usage information is available to demonstrate that producers are good stewards of the land. This study will provide a profile of pesticide use and pest management practices at state and district levels for North Dakota.

This study is a joint undertaking of the North Dakota State University Extension Service, North Dakota Department of Agriculture, and USDA's National Agricultural Statistics Service, North Dakota Field Office. Through this cooperative effort, we are able to provide reliable results in a very efficient manner.

The study will be conducted as a telephone interview. Interviews will begin in late January and continue through March. Information that will be requested includes crop acres, use of seed treatments, acres and crops treated with specific pesticides, use of genetically modified crops, and information about pest management practices and decisions.

Regarding the interview, confidentiality is assured and response will be voluntary. Since you are only part of a small group selected from across the state, we hope you understand the importance and value of this information and will be willing to participate when contacted. The results of the survey will be available by fall 2009 through NDSU and your local extension agent.

Thank you in advance for your time and cooperation.

Sincerely,

Duane Hauck, Director
North Dakota State University
Extension Service

Darin Jantzi, Director
USDA/NASS
North Dakota Field Office

IV. Genetically modified crops are available in North Dakota for corn, soybeans and canola. Please report the acres you planted of these crops in 2008.

CORN	Bt variety for insect resistance	Bt variety for Corn Rootworm resistance	Glyphosate (Roundup Ready) resistant variety	Liberty resistant variety	Clearfield, non-GM, herbicide resistant variety	Stacked Gene Variety (Bt + Herbicide)
Acres =	6101	6106	6102	6103	6104	6105

SOYBEAN	Glyphosate (Roundup Ready) resistant variety	SUGARBEET	Glyphosate (Roundup Ready) resistant variety	SUNFLOWER	Clearfield resistant variety	Express resistant variety
Acres =	6111	Acres =	6141	Acres =	6151	6152

CANOLA	Glyphosate (Roundup Ready) resistant variety	Liberty resistant variety	Clearfield, non-GM, herbicide resistant variety
Acres =	6131	6132	6133

V. Your pest management decisions and practices

Yes = 1 No = 3

Do you . . .	answer Yes or No for each pest category	
• scout fields regularly for pests?		6301
• make routine treatments for pests you experienced the previous year?		6302
• make treatments based on identity, density, or population size?		6303
• use University or Extension treatment guidelines for making pest treatment decisions?		6304
• use tilling, chopping, mowing, burning of field edges, lanes, ditches, roadways or fence lines to manage pests in your fields?		6305
• consider pest resistance when selecting varieties to manage pests?		6306
• alternate pesticides to keep pests from becoming resistant to pesticides?		6307
• rotate crops to manage pests?		6308
• use disease, insect or seed forecasting information available on the Internet or via toll free phone lines?		6309
• use Internet to find information necessary for pest management decisions?		6310
• employ the services of a crop consultant to help manage pests?		6311
• plan to INCREASE acres of genetically modified crops used for pest management?		6312
• plan to DECREASE acres of genetically modified crops used for pest management?		6313

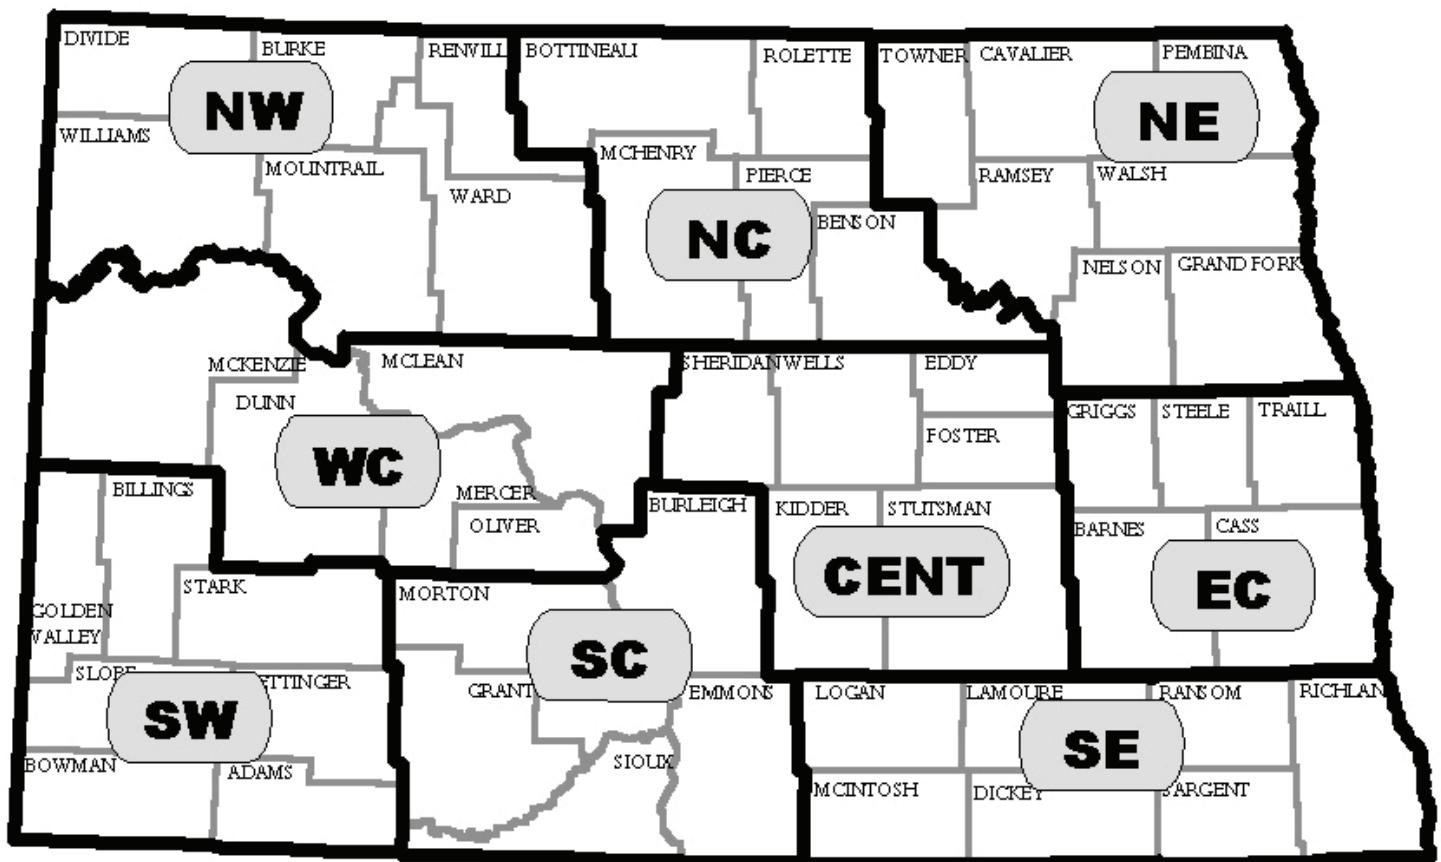

This completes the questionnaire. Thank you for your cooperation.

APPENDIX B.

North Dakota Agricultural Statistics Districts

APPENDIX C

Trade and common names of pesticides

There are many trade names for pesticide active ingredients. Below is only a partial list of product names.	
<u>Common name</u>	<u>Product name(s)</u>
2,4-D	2,4-D
2,4-D+Dicamba	KambaMaster, Rifle D
2,4-DB	Butoxone
2,4-DB	Butyrac
Acetochlor	Breakfree, Harness, Surpass, Volley
Acetochlor+Atrazine	Breakfree ATZ Lite, Confidence Extra, Harness Xtra, Keystone LA
Acetochlor+Clopyralid+Flumetsulam	SureStart
Alachlor	Arena, Cropstar, Intrro, Lasso, Saddle, Stall
Aminopyralid	Milestone
Aminopyralid+2,4-D	Fore Front R&P
Atrazine	AAtrex
Atrazine+Glufosinate	Liberty ATZ
Atrazine+Metolachlor	Cinch ATZ Lite
Atrazine+S-Metolachlor	Bicep II Magnum, Bicep Lite II Magnum, Cinch ATZ, Lite
Azoxystrobin	Abound, Amistar, Heritage, Quadris
Copper sulfate	Basic Copper
Bentazon	Ascend, Basagran, Depend, Pledge, Rezult B
Bifenthrin	Attain, Bifenthrin, Biflex, Brigade, Capture
Bifenthrin+Zeta-Cypermethrin	Hero
Bromoxynil+2,4-D	AgSCO B-4, DoubleUp B+G, Maestro D, Weco Max
Bromoxynil	Bromox, Brox, Buctril, Moxy
Bromoxynil+Fluroxypyr	Starane NXT
Bromoxynil+MCRA	Bison, Bromac, Bromox MCPA, Bronate Advanced, Brox M, Maestro MA, Wildcard Xtra
Carbaryl	Carbaryl, Sevin
Carbofuran	Furadan
Carboxin	Vitavax, Kernel Guard Supreme
Carboxin+Diazinon+Lindane	Germate Plus
Carboxin+Imazalil+Thiabendazole	RTU-Vitavax-Extra
Carboxin+Imazalil+Thiabendazole	Vitavax Extra
Carboxin+Maneb+Lindane	DB Green+Vitavax, Enhance Plus
Carboxin+Thiram	RTU-Vitavax-Thiram, Vitavax 200
Carboxin+Thiram+Lindane	VTL
Carboxin+Thiram+Metalaxyl	Stiletto
Carfentrazone+Sulfentrazone	Spartan Charge
Carfentrazone	Aim, Shark
Carfentrazone+2,4-D	Rage D-Tech
Carfentrazone+Halosulfuron	Priority
Chlorimuron	Classic
Chlorothalonil	Applause, Bravo, Chloronil 720, Daconil, Echo, Ensign, Equus, Terranil, Thalonil
Chlorothalonil+Azoxystrobin	Quadris Opti
Chlorothalonil+Mefenoxam	Ridomil Gold/Bravo
Chlorothalonil+Thiophanate	Consyst, Spectro
Chlorpyrifos	Chlorpyrifos, Durban, Govern, Lorsban, Pilot, Reldan
Chlorpyrifos+Gamma-cyhalothrin	Cobalt
Chlorsulfuron+Metsulfuron	Chism, Finesse, Report Extra
Clethodim	Arrow, Clethodim, Intensity, others
Clodinafop	Discover/NG
Clopyralid	Stinger, Clopyr Ag, Garrison, Spur
Clopyralid+Fluroxypyr	Colt, WideMatch
Clopyralid+2,4-D	Curtail, Cutback
Clopyralid+MCRA	Curtail M
Clopyralid+Triclopyr	Redeem
Cloransulam+Sulfentrazone	Authority First, Sonic
Cloransulam	Amplify, FirstRate
Clothianidin	Poncho, Prosper
Copper	Agra-cop, Coppericide, Kocide, Nu-Cop, Nordox, Oxycop, Copper Sulfate
Cyfluthrin	Baythroid, Tempo
Cyfluthrin+Tebupirimphos	Aztec
Cymoxanil	Curzate
Deltamethrin	Battalion, Decis, Delta Gold, Deltagard
Desmedipham	Alphanex, Betanex
Desmedipham+Phenmedipham	Betamix, Phen-Des 8+8
Desmedipham+Phenmedipham+Ethofumesate	BNB Plus, Progress
Dicamba	Banvel, Clarity, Rifle, Sterling Blue, Vision
Dicamba+2,4-D	Brash, Latigo, Outlaw, Weedmaster
Dicamba+Thifensulf+Tribenuron+Metsulf	Agility
Difenoconazole	Dividend, Inspire
Difenoconazole+Mefenoxam	Incentive RTA
Diflufenzoxyr+Dicamba	Distinct, Overdrive, Status
Dimethenamid	Establish, Frontier, Outlook, Propel
Dimethipin	Harvade
Dimethoate	Cygon, Cymate, De-Fend, Digon
Diquat	Reglone
Endothall	Des-I-Cate II
Esfenvalerate	Asana
Ethalfluralin	Sonalan
Ethofumesate	Ethotron, Nortron, Progress
Ethyl parathion	Parathion
Etridiazole+Thiophanate	Banrot
Fenoxaprop	Puma
Fenoxaprop+Fluazifop	Fusion
Fenoxaprop+Pyrasulfuron+Bromoxynil	Wolverine
Flucarbazone	Everest, Pre-Pare
Flumiclorac	Resource
Flumioxazin	Valor, Chateau, Encompass, Gangster V
Flumioxazin+Cloransulam	Gangster
Fluroxypyr	Obtain, Starane, Vista
Fluroxypyr+2,4-D	Starane+Saber
Fluroxypyr+2,4-D	Starane+Salvo
Fluroxypyr+MCRA	Starane+Sword
Fluthiacet	Cadet
Fomesafen	Flexstar, Reflex
Foramsulfuron	Option
Gamma-cyhalothrin	Proaxis, Prolex
Glufosinate-ammonium	Finale, Ignite 280, Liberty, Rely
Glyphosate	Glyphosate, Roundup
Glyphosate+Sulfentrazone	Spartan Advance
Halosulfuron+Dicamba	Yukon
Halosulfuron	Permit, Sandea
Imazamethabenz	Assert
Imazamox	Beyond, Raptor
Imazamox+MCRA	ClearMax
Imazapic	Cadre, Plateau

Imazethapyr	Pursuit
Imazethapyr+Dicamba	Resolve
Imazethapyr+Glyphosate	Extreme
Imazethapyr+Imazapyr	Lightning
Imazethapyr+Sulfentrazone	Authority Assist
Imidacloprid	Admire, Couraze, Impulse, Marathon, Gaucho
Imidacloprid+Carboxin	Latitude
Imidacloprid+Metalaxy	Concur
Isoxaflutole	Balance
Isoxaflutole+Thien carbazole	Corvus
Lambda-cyhalothrin	Battle, Karate, Warrior
Lindane	Lindane
Malathion	Cythion, Malathion
Mancozeb	Dithane, Manzate, Penncozeb,
Mancozeb+Copper sulfate	Cuprofix
Mancozeb+Copper hydroxide	Junction, Mankocide
Mancozeb+Cymoxanil	Curzate, Manex
Mancozeb+Myclobutanil	Clevis
Mancozeb+Thiophanate	Zyban
Mancozeb+Zoxamide	Gavel
Maneb	Dithane
Maneb+Lindane	DB Green
Maneb+Thiabendazole	Granox Plus
Maneb+Triphenyltin hydroxide	Pro-Tex, Tin-Man
MCPP+2,4-D+Dicamba	Green Light Wipe Out
Mefenoxam	Apron, Ridomil
Mefenoxam+Chlorothalonil	Flouronil, Ridomil Gold Bravo
Mefenoxam+Copper hydroxide	Ridomil Gold/Copper
Mefenoxam+Mancozeb	Ridomil Gold MZ
Mesosulfuron	Silverado
Mesosulfuron+Propoxycarbazone	Rimfire
Mesotrione	Callisto
Mesotrione+Glyphosate+S-metolachlor	Halex GT
Metalaxy	Apron
Metalaxy+PCNB	Apron-Terraclor
Methomyl	Lannate, Nudrin
Methyl parathion	Penncap-M
Metolachlor	Me-Too-Lachlor, Parallel, Stalwart
Metribuzin	Sencor
Metribuzin+Sulfentrazone	Authority MTZ
Metsulfuron	Accurate, Ally, Cimarron, Escort, others
Metsulfuron+Dicamba+2,4-D	Cimarron Max
Mevinphos	Phosdrin
Mineral oil	Biocover UL
Nicosulfuron	Accent, Nic-It, Nico
Nicosulfuron+Rimsulfuron	Steadfast
Nicosulfuron+Thifensulfuron	Stout
Paraquat	Firestorm, Gramoxone, Parazone, others
Pendimethalin	Acumen, Pendimax, Prowl
Pendimethalin+Imazethapyr	Pursuit Plus
Permethrin	Pounce
Permethrin+Carboxin	Kernel Guard Supreme
Phosmet	Imidan
Picloram	Tordon 22K
Picloram+2,4-D	Grazon P+D, Gun Slinger
Pinoxaden	Axial
Propiconazole	Tilt, PropiMax
Propiconazole+Azoxystrobin	Quilt
Propiconazole+Chlorothalonil	Tilt/Bravo
Propiconazole+Thiophanate	Tilt Plus
Propiconazole+Trifloxystrobin	Stratego
Propiconazole+Triphenyltin hydroxide	Orbit/Super Tin
Propoxycarbazone	Olympus
Prothioconazole	Proline
Prothioconazole+Tebuconazole	Prosaro
Pyraclostrobin	Cabrio
Pyraclostrobin+Tebuconazole	Headline
Pyraflufen	ET
Pyroxulam	PowerFlex
Pyroxulam+Florasulam+Fluroxypyr	GoldSky
Quinclorac	Paramount
Quizalofop-P-ethyl	Assure II, Targa
Rimsulfuron	Matrix, Resolve
Sethoxydim	Poast, Prestige, Rezult G, Trigger
S-Metolachlor	Brawl, Cinch, Dual Magnum
S-Metolachlor+Mesotriione	Camix
S-Metolachlor+Mesotriione+Atrazine	Lumax
S-Metolachlor+Metribuzin	Boundary
Sodium chlorate	Defol
Sulfentrazone	Authority, Blanket, Spartan
Sulfentrazone+Metribuzin	Authority MTZ
Tebuconazole	Folicur, Orius
Tebuconazole+Metalaxy	Raxil MD
Tebuconazole+Metalaxy+Imazalil	Raxil MD Extra
Tebufenozide	Confirm
Tefluthrin	Force
Tembotrione	Laudis
Terbufos	Counter
Tetraconazole	Domark, Eminent
Thiamethoxam	Cruiser
Thiamethoxam+Fludioxonil	Cruiser Maxx
Thiameth.+Mefenoxam+Difenocon	Cruiser Maxx
Thiamethoxam+Mefenoxam+Fludioxonil	Cruiser Maxx
Thiameth.+Mefenoxam+Fludioxonil+Difenocon	Helix
Thiamethoxam+Mefenoxam	Ridomil Gold Platinum
Thifensulfuron+Tribenuron	Affinity BroadSpec, Affinity TankMix, Harmony Extra
Thifensulfuron+Tribenuron+Metsulfuron	Accurate Extra, Ally Extra, Canvas
Thifensulfuron	Harass, Harmony GT, Treaty, Unity
Thiophanate	Topsin
Thiophanate+Mancozeb	Zyban
Thiram	Gustafson Yield Shield
Thiram+Thiabendazole	Agrosol
Topramezone	Impact
Tralkoxydim	Achieve
Tralomethrin	Scout
Triallate+Trifluralin	Buckle
Tribenuron	Express, Nuance, Victory
Trifloxystrobin	Flint, Gem, Trilex
Triflumizole	Procure
Trifluralin	Treflan, Triflurex, Trilin, Trust
Triflusulfuron	UpBeet
Triphenyltin hydroxide	Agri Tin, Super Tin
Triticonazole+Thiram	Charter
Vinclozolin	Curalan, Ronilan
Zeta-cypermethrin	Fury, Mustang
