Aerial GLIMPSE

The overall Form Design has a significant influence on user actions. The ramp elements have designed and in certain use coverage and order disposition in a business manner.

The focus of the project is to create a building by capturing the best architectural ideas in a series of small pieces of the site and applying a design which guided in various site responses to a small 2.5 acre site.

The building is a long, low-profile structure with a flat roof and a series of vertical elements. The design is a response to the site's topography and the need for a building that is both functional and aesthetically pleasing. The building is designed to be a landmark structure that will define the area and provide a sense of place for the community.
