The Bakken Shale Formation

The Bakken Shale is a deposit of shale, sandstone, and other rock types, located in North Dakota and Montana. It is the largest oil discovery in the United States and one of the largest shale oil deposits in the world. The Bakken Shale is predicted to contain billions of barrels of oil, making it a significant contributor to the global energy supply.

Population Growth

The population of Dickinson has been steadily increasing. The 2010 census shows that the population has grown to about 18,000, up 2,000 people from the year 2000. The average age of individuals living in the city is 35. This means that Dickinson has a younger population compared to many other cities in the region.

Design Intervention Areas

The heart River are less than 1 mile from the corner of Sims and 1st ave. A new parking lot will provide majority of the parking for the area. It is also bringing creating millions of new, high paying jobs in the area. It is also bringing people to Dickinson, providing increased business revenue for merchants and providing people with increased shopping and job opportunities.

Revitalizing Small Scale Urban Corridors

How can a small city in the Midwest prepare and accommodate for current and future population growth, while maintaining long term community viability?
