Virtual Space in a Physical World
What do we need? What makes us who we are? What does it take to satisfy our oldest desires? For some all it takes is a spark of imagination. Others require something more. As technology evolves that something more becomes more feasible.

In the pixelated realm of a video game anything is possible. Wonder and inspiration are the play things of video game developers.

This small exposition center reflects my exploration of steel, glass, and various techniques of video game design. The building's systems yearn to be understood by any who dare to try.

When video games emerged the field of architecture gained a powerful ally. The expression of ideas became exponentially easier as computer generated environments became more and more realistic. This brings us back to where we started. Our primal need to express what we feel. We want to be understood. Our ideas will be heard.
