| | Barley Varieties in North Dakota, 1949 by C. J. Heltemes and L. W. Orvold | 100 |

"I do not believe that the work of our experiment stations is at present fully appreciated by the public. The reason: The story of research has not been told as it should have been over a period of years. Only a comparatively small percentage of our rural people appreciate the values and profits they are receiving from our experiment station laboratories. If our research work is to forge ahead, or even if it is not to stand still or retrench, its benefits to society at large must be made increasingly apparent to the public."

—W. L. Treaster, Director of Public Relations, Michigan State College.
