New Era in Insect Control by J. A. Munro	172
Prices of N. D. Farm Products by Perry V. Hemphill	179

“Man has never conquered the underlying forces of nature. But he has learned to understand these forces, to move erect among them, and to use them for his own ends. He cannot stop or bring the storms; but he can irrigate the desert and dam the flood. He has not fundamentally altered the limits of his life or of his body; but he has learned how to expand his powers within these known limits. He cannot successfully defy nature, but he is able to follow, influence, and speed her course. And in doing so he has learned to halt disease, to lessen suffering, and to increase his capacities for health and the appreciation of life.”

—Anne Morrow Lindbergh.
