EXPERIMENT STATION
FARGO, NORTH DAKOTA

CROSSBRED INBRED—These little fellows, at the North Dakota Agricultural College poultry research center, figure prominently in a regional (13 state) project on breeding to increase the economic qualities of chickens. White Plymouth Rocks, New Hampshires and White Leghorns from inbred lines were crossed to determine their combining ability. The little fellows will be carefully observed to judge their growth, livability, egg production and meat qualities.

TABLE OF CONTENTS

The Kennebec Potato in North Dakota.....	139
By Wm. G. Hoyman and Harold Mattson	
New Seed Treatments for Grass and Legume Seeds.....	143
By W. E. Brentzel

By William Wiidakas	
Potato Variety Trials in North Dakota—1950.....	165
By Harold Mattson and Robert Johansen	
Prices of North Dakota Farm Products.....	171
By Perry V. Hemphill	
Oil and Protein Content of Sunflower Seed.....	173
By C. O. Clagett, Geo. W. Hoffman and Ingmar Sollin	
Wireworm Control by Seed Treatment	178
By J. A. Munro	

“It would be difficult to think of an age when there is so little wisdom. In the present world people are extraordinarily specialized, and one man knows everything about his own job, but nothing about the next. Wisdom is quite a different thing than specialized knowledge.”

—Bertrand Russell
