Alhambra

Cordoba

This building has courtyards that are open to the outdoors and are surrounded by the building. This impacted the design of the gallery spaces by providing spaces for the natural environment in the building. Column arrangement is something that was noticed in this space. The columns can create paths and patterns in the space. These patterns can help the visitor find and move through out the space.

ARCH 772 Design Thesis Dennis H. Bukowski Regin Schwaen

city 2

This is a piece of "Land Art" that is in the southern plains of the United States. This influenced the building design in a way that helped to realize that a building can be an art form.

East Wing National Gallery

In this building there is a different type of structural layout based on triangles. Triangles had a large impact on the design and layout of the science museum.

Milwaukee Art Museum

The Milwaukee Art Museum has an underground parking area that is below the exhibit space. This influenced the design by having the parking within the building and off of the site.

Quantum Mechanics

Talking about quantum mechanics in the design of the science museum was influential. In thinking about what happens in between atoms and other particles, the building spaces and the spaces between were thought about in a different light.

Thinking about the start of the universe and how different planets and galaxies move helped to influence the design of the science museum. These moments are complex and interesting.
