**Senate Approves Housing Resolution**

The Senate approved a housing resolution to address concerns about the proposed merger of the 4-H and the NDSU Memorial Union. As an alternative to the merger, Senate recommended an investigation and renegotiation of student needs of the Union.

In proposing the motion, Senator Schroeder noted the shift of student population to the northern end of campus, and predictions of increasing growth in that area.

Schroeder suggested looking into the possibilities of a satellite Union and expansion of the present Union facilities. It was suggested perhaps the 4-H could consider merging with the University to meet its needs.

The special election for North High Rise senator will be held Tuesday in the North High Rise from 10 a.m. to 7 p.m. Some students do not believe the North High Rise may vote in the election, which is being held to fill the vacant seat in the student senate. Candidates are campaigning. The campaign period must end not later than midnight Monday.
Mystic Off - Campus
Brawthen Edits Independent Paper

Dave Brawthen, editor of the MSC student newspaper, the Mystic, until its demise during spring quarter last year, is now editing the Mystic, an independent news magazine published yesterday for the first time.

The MSC paper was under administrative fire during the entire school year for questioned usage of four letter words. Brawthen took over as editor when former editor, Joe Bernick, graduated at the end of winter quarter.

The administration suspended publication of the Mystic when Brawthen published excerpts from Convivio, an MSC literary magazine. The magazine had been denied publication because the administration felt portions of the content were in poor taste.

This year MSC will not have a student paper, at least until the new Mystic is given a chance to get established.

“I believe the journalistic nature of the paper is much improved over last year,” said Editor Brawthen. "We're using more of a magazine format and will be covering straight news as well as presenting special features and political analysis, such as the articles by Brian Coyle and Jerry Clark in the first issue."

The Mystic will be aimed at the entire tri-college community. All news stories on the MSC campus will be covered, however, Sno-Week and similar activities will no longer be considered front page material.

Editorial viewpoint will take a liberal-radical approach, attempting to educate and inform readers of existing problems and their causes, as seen from the left.

Although the Mystic is written with a definite point of view, the editor considers ideology as only a means to an end. When possible, an attempt will be made to bring together a coalition for action. The paper will be covered, however, Sno-Week is now editing the Mystic, an independent news magazine published yesterday for the first time of its demise during spring quarter last year, Brawthen published excerpts that were banned from publication of the former editor. Joe Bernick, graduated last year, said Editor Brawthen. "We're using more of a magazine format and we'll be getting established."

"Freedom from administrative control does not exempt us from the legal restraints which govern all papers. Legal repercussions aside, we know that a libel charge will kill a journalist professionally."

Financing for the Mystic will come from advertising and the $5 annual fee charged for members in the newspaper coop. Members are entitled to vote on editorial policy and elect the editor for the next year. Brawthen emphasizes that editorial policy will be put before the members only in crisis situations.

“We are trying to get our point of view across, and to win people to our way of thinking. We've learned a lot from our mistakes last year. Our concern is a moral one, for human beings and their problems. Students are our first emphasis, but such issues as rent and farm problems touch the surface of our concern."

"Our goal is to communicate, and I think we're past the stage of catering to criticism from the community with a slap-in-the-face attitude. We want to convince them of the movement as we keep the tree for peace."

Brawthen is aware of the limitations as well as the benefits of running an independent paper. "A free press is not really free as long as it must depend on advertising. We have had no trouble selling ads for our first issue, and as long as we keep the Mystic intellectually responsible, there should be no problem."

"Financially, the paper will be left to the members in the newspaper coop. Members are entitled to vote on editorial policy and elect the editor for the next year. Brawthen emphasizes that editorial policy will be put before the members only in crisis situations."

The Baby Bison opened their 1969 season before 1000 fans with a non-controversial 19-14 win over Concordia's Junior Varsity. The tough defense sparkled while the offense was spectacular.

Concordia's JV's recovered five fumbles and intercepted three passes the entire game until the final moments. The Baby Bison scored first on a 1-yard run by fullback Bob Perez following a big fourth down pass from quarterback Tim Kaiser to Don Smrekar, good for 18 yards and a first down. Smrekar kicked the extra point.

Concordia came back on a 15-yard pass play less than three minutes later. Their extra point attempt was unsuccessful.

One of the key plays of the night for the Baby Bison was turned in by split end Pete Lanza and quarterback Don Siverson in the final play of the first half. Siverson connected with Lanza on a 20-yard pass for a touchdown to put the Bison ahead 13-6 at halftime.

Near the end of the third quarter Concordia halfback Greg Sainsbury broke away for a 50-yard touchdown, and the Cobber's defense Nips Concordia defense was superior for the Baby Bison throughout the entire game.

The final statistics show a clear superiority that is not reflected in the score. The rushing totals were 193 yards for Concordia and 42 yards for the Cobbers. The Baby Bison also out-passed Concordia 142 yards to 47 yards, giving them an overwhelming margin in total offense of 335 to 146 yards.

The next game for the Baby Bison is Monday night, Oct. 6, at Moorhead State College.

Molm Presses For Raise, Salaries For Senators

During the first Student Senate meeting, Sept. 14, student president Butch Molm advocated increasing the rate of pay for presiden­tive, finance commissioner and secretary. Student Senator, who serve without pay, would receive a salary of $30 a quarter. Sen­ators, from 7:30 a.m. until 9 a.m., Friday, Sept. 26. Public tour will begin every ten minutes at the laboratory, located on the west of Daecotah Field.

The Agricultural Research Service (ARS) facility houses offices, labs and $1 million of equipment for 35 USDA scientists studying physical and chemical processes involved in the intake, movement, breakdown and elimination of agricultural chemicals in plants and animals.

Molm decried the "everly benefited, antiquated budge of the stu­dent senators" and stated the proposed salaries are on a par with or above those at universities. He stated it would probably be necessary to have $1000 from the Special Projects Fund to pay for the group's salaries.

Individual senators were asked if they would support Molm's proposal to pay the senators a monthly salary of $30 a quarter.

Greg Blinkley said, "Yes, at present. It would encourage senators to do a better job. However, the money does not mean a lot to me."

San Dardis agreed. "Yes, at present. The decision should be discussed by the Finance Committee.""I don't agree with it. Spending time was a hazard of the job and don't agree with the salary proposal," said Linda Noeker.

Kathy O'Keefe said, "I would do it for free. When we were senators, we knew we would not receive money for it."

"The money should be put into the SAB and not be given to the senators. A lot more research should go into the proposal," said Zehren.

METABOLISM LAB OPEN HOUSE

Out-of-State Frosh Name Change

New York and Wisconsin are among two states that have contributed two players to the TV football badly needed by the University. New York comes defensive and Ken Tirol as White Plains High School's Maurice Minter, offensive tackle, and Warner High School's most valuable player, Chris Zehren, a halfback-det­ sive halfback Dennis Bernett-Sparks.

All alone representing the state of Pennsylvania is guard Paul Trivel, a captain and most valuable player at Schwenck High School.

High Illegal Kill

Illegal kill and waterfowl waste from the early teal season were investigated by members of the NDSU Chapter of the Wildlife Society recently. Equipped with boots, old clothes and a canoe, members searched two large marsh areas about one mile south of Alice, N. D. All dead birds were collected, and sick or wounded birds were recorded.

Three American coots, one eider duck, two Franklin's gulls, one mallard duck, two redhead geese, one scaup duck, one green-winged teal duck, and fourteen buffleheads were collected during the three hour search. In addition, wounded birds seen were three blue-winged teal, one mallard, one gadwall, and one yellow-headed blackbird. The birds found are only indications of what actually was left in the marsh from the nine-day hunting season. Because of the size of the marshes, only open water areas were searched, which constituted about 60 per cent of the total marsh area.

Birds wounded near the tall bullrush or dropped in the cover had little chance of being found by the hunter. Because of the difficulty in searching this area, no attempt was made to look for birds there.

What does all of this mean? Basically three things:

1. Teal hunters shot many other species of birds other than teal,
2. The average teal hunter is placed in a situation where the regulations are far beyond his capability of abiding by them, and
3. Any further season of this sort could prove dangerous to waterfowl populations of North America.

One can only guess at the number of birds (both legal and illegal birds) shot and lost or left, but four or five times the number seen may still be a low estimate.

Illegal Kill

The illegal kill uncovered by the NDSU Wildlife Society following the early teal season.

Student Government Has Its Problems

It is an old cliché around colleges that formally elected student governments are outmoded, that they are an anachronism. The young revolutionaries and radicals are first to place blame on student governments along with most of the administration. In one way or another, student governments are outmoded, that they are an anachronism. The young revolutionaries and radicals are first to place blame on governments for being "too close" or the administration. In many cases, the average student believes that the student government has no real power, and really just doesn't care about it one way or another.

Our Student Senate and Student Government have, for the most part, attempted to be active in meaningful campus affairs. They have spent a million dollars in student activity fees per year. They have led the drive to get students onto the many committees responsible for making far-reaching decisions. For the most part we shouldn't be disappointed.

However, last Sunday's meeting of the Student Senate provided an object lesson in the ways and reasons student governments are sometimes act as powerless assemblies.

In most cases, it's not entirely the fault of the Senate that they are unable to act. Certain combinations of circumstances, from inside and outside the group, can stifle any attempt at constructive effort.

An examination of these problems might prove worthwhile in winging out some of the problems of student governments anywhere.

Lack of Information

Let's face it — a great many student senators are just plain uninformed. They really don't know what's happening. With this problem, they are far from being informed and your suspicions which may not be in the best interests of their constituencies.

On the matter of the housing problem and the purchase of temporary "for emergency" housing, it was made quite clear that many of the senators simply did not know about the problem. To be sure, committees were formed and meetings were held, but after the meetings, nobody seemed to have the answers to pertinent questions.

HURRIED PROCEEDINGS

This housing problem provides an example of how the Senate can be stumped into action too quickly for proper investigation.

The housing meeting was an "emergency" session to discuss temporary housing and the Union addition. It had to be called because deadlines for action were so close that a later meeting would have been too late.

Under such conditions, it is difficult to make a proper investigation or hold meetings on such immediate issues.

It is a situation common to the Senate, from either administrative officials or similar groups.

Sensational Attitudes

Attitude of a senator is the key which makes him (or her) effective or ineffective. In many, (but certainly not all) cases, the senator thinks that the only thing he need do is to sit in the meeting and cast a vote. What is much a vote worth?

These individuals do not volunteer for investigative committees, nor do they volunteer their opinions during debate if they are asked. The are nonentities insomuch as being representatives of the voters who elected them. It would seem that, after having won their "popularity contest," they prefer to remain as nearsighted in the knowledge that their names will be properly inscribed in the annals of a member of the Senate.

These senators' attitude of "We can't do anything about it anyway" or "It's really not our business." Some senators truly believe that.

The administration comes to the Senate with a temporary housing proposal, and these senators say, in effect, "We'd really rather not take the responsibility."

What sort of attitude is that?

CONSTITUENT APATHY

What the Senate needs, more than anything else, is to have those who elected them Jack the Senate up a bit. Without students constantly reminding them of their responsibility to represent, they soon fall into the "I'll do it later" attitude which can kill a legislation.

Of course, that means an interested and informed student body, and perhaps that's a bit too much.

If all goes well, I should have a moustache pretty soon. I'm not really sure how soon, though. At the time of this writing my moustache is 6.32 days old. Now this is not an old moustache by any means. As a matter of fact, it is a very young moustache and should be treated as such.

Now I can live with such small insults as, "Forget to wash your face Olsen?" I can even live with, "Ya break your razor hip-"?

But when I walk into work after letting it grow for five days and hear Doug say, "Well, you finally shaved it off!" That's going just a bit too far. I'll be the first to admit that my upper lip isn't exactly rocking with hair, but the least they can do is give me a chance.

You see it all started when I was very young. I've always wanted a moustache, and I dreamed of the day I would be old enough to grow my own. My chance finally came last week. Of course, I'm not informed as to whether or not there are plans in the making to start life anew.

As I said, I don't have the big identity answer yet. So in the meantime, I'll grow a moustache.

**Contact lenses** are made of modern plastics which have entirely different characteristics than the tissues and fluids of the eye. Consequently, your contact lenses must be made to fit individual eyes for complete contact lens care. This applies to anyone who has needed two or more separate solutions to properly mold and care for your contacts, making them ready for your eyes. But now there’s LenSine from the makers of Murine. LenSine, for contact comfort and convenience. LenSine is the one solution for complete contact lens care. Just a drop or two of LenSine coats and lubricates your lens. This allows the lens to float more freely in the natural fluids of your eye. Why? Because LenSine is an “isotypic” solution, very much like your own tears. LenSine is compatible with the eye.

Cleaning your contacts with LenSine results in the build-up of foreign deposits on the lenses. And soaking your contacts in LenSine between wearing periods assures you of proper lens hygiene. You get a free soaking-storing container “solution” very much like your own tears. LenSine is completely sterile, self-contained, and antiseptic. Let caring for your contacts be as convenient as wearing them. Get some LenSine...Mother’s little helper.

A tough army general is assigned to train and lead 12 convicts on a highly suicidal behind-the-lines mission before D-Day. Slightly sadistic, the film is filled with humor and knuckle-busting action.
Poultry Research Center Strives Toward Building a Better Bird

The center for much of North Dakota's poultry research is the poultry research plant, located on the northwest corner of the campus.

The plant consists of offices and laboratory, main research building, two metal barns which house the turkeys, two or three smaller laying coops and several grain shelters.

The main research building was built around 1959. The previous structure, a two-story wooden barn, had burned down a short while before. The eastern half of the main building consists of small pens used for storage and projects which must be completely isolated from the main flock.

In the center are cages for the majority of the chickens. Here, in cages suspended from the ceiling in a step-like fashion, is where some 2500 chickens are kept. Most of the nutritional research is done here.

On the west side of the main building are smaller rooms, and a small processing room. At the front of the building is the egg grading and candling room, packing room and a large egg cooler.

Research is conducted by three professional staff members. They are Dr. Jerry Cell and Dr. Ronald Rose, nutritionists under the animal science department, and Robert Johnson, instructor, student and plant manager. Also employed full time is a secretary, laboratory technician and four workers. Two students are employed part time.

The research carried on can be divided into three main areas, nutrition, range management and genetics. The nutrition research is by far the largest, encompassing 75 per cent of the fowl.

All of the livestocks, which includes some 6500 birds, are experimental animals. Each group of fowl involved in a special project must be segregated from the other groups. This demands numerous pens, each with its own ration, watering schedule, etc.

Johnson keeps essential records. "A all of the feeding and egg collection is done by hand because of the many different rations," said Johnson. "This results in a 7 day week, 12 month per year job. The livestock will not take a holiday."

One may wonder where all of the poultry comes from and how it all goes again after the project. The plant acquires its stock from commercial breeders. The process of changing has been enormous since all are changed at the same time. In this way there is no problem of having old chickens mixed in with young birds. The change usually lasts from three to four weeks. All of the pens must be cleaned, disinfected and refilled for the new chickens.

"Sanitation in poultry raising is very important," Johnson said. "This is costly the poultry industry a great deal every year."

The product from the plant goes mainly to commercial processors. Only the large, grade AA eggs are used on the campus at the food service and Union. All of the smaller eggs are sent to a commercial processor in Minot.

A new facet of poultry research is now being explored by experimenting with poultry and related to man. Cell is currently engaged in this project. Working with a grant of $500 he is studying the effects of metals on the nutritional requirements of the animals.

"Poultry is anything but glamorous," said Cell. "The poultry industry is a highly specialized industry and because of this it does not attract many students.

We have only 30 to 40 student taking Introduction to Poultry."
Youth Fare Raised to 60% of Full Fare

WASHINGTON — (CPS) — Airline youth fares will continue, but not at the current half-price discount.

The five-man Civil Aeronautics Board (CAB) decided this month that while the fares, which enable persons 12-22 to fly standby at low cost, were fair in principle, airlines should be allowed to raise them to 60 per cent of the regular coach fare.

The reason: steep wage settlements, more expensive fuel and higher landing fees have lowered airline profits excessively, according to the CAB, and price increases in both regular and promotional discounts are necessary to increase revenue.

The major air carriers offering special youth fares — American, Continental, Northwest, TWA, United, Eastern and Western — were expected to take advantage of the CAB ruling and raise their prices. The new rates will take effect October 1.

The youth fare issue was forced to a head last January when several bus companies, all of which had lost business to the airlines on account of the fares, filed suit to make the CAB listen to their arguments that the discounts were illegal.

The Fifth Circuit Court of Appeals in New Orleans ordered the CAB to investigate, and CAB examiner Arthur S. Present subsequently found the fare to be "unjustly discriminatory" and in violation of the Federal Aviation Act of 1958.

Present recommended the fares be abolished, but the CAB delayed action when protest was registered by the National Student Marketing Corporation, and many students and parents who deluged CAB offices with letters.

In its recent decision, the CAB concluded that the fares were not discriminatory, but benefitted all travelers. By engendering development of a new market they "have contributed sizably to making modern equipment and convenient schedules more broadly available," the CAB said.

"It is clear that the youth standby fares have generated a significant amount of new traffic," it said. "The 12-22 years age groups are more responsive to price than is the market as a whole. Moreover, in addition to the short-run generative effect of youth fares, the longterm traffic impact also is significant.

"By encouraging persons to travel by air at an early age the fares will inculcate habits . . . which will be reflected in a ready acceptance of air travel throughout their adult lives."

Do you have to give up your identity to make it in a big corporation?

You've heard the stories: One big corporation forbids you to wear anything but white shirts. Another says it wants you to be "creative" — and gives you a 4-pound rule book telling you exactly how to do it. Yet another doesn't want you to buy a more expensive car than your boss because "it wouldn't look right.'

You're not alone. People hiding behind organization charts and smiling at the right time. They came from people who used their brains:

People who revolutionized picture-taking with the General Telephone & Electronics flashcube, who developed the high-energy liquid laser, who came up with the sharpest color TV picture in the world, who pioneered instant electronic stock market quotations, and so on.

We are an equal opportunity employer: All you need to make it with us is a good head on your shoulders.

"ONE FREE" with each 10 gallon purchase offer good while supply lasts

STOP IN AND GET YOURS TODAY
Amidst flapping sheet plastic and beside numerous junked automobiles, the proposed temporary housing units are in storage.

Some section of the units had license plates which were older than the three years these units have been implied to be.

On one of the housing sections, a South Dakota mobile home license from 1963 was displayed, while other sections showed plates from 1964, one from Missouri and three from North Dakota.

Dilapidated ceilings and floors marked much of the interior of the trailers.

Numerous items of junk filled the hallway sections, in some cases from one end to the other. Among the items were assorted chairs, a water heater or two, and other major appliances. Mattresses lined the walls in one hallway unit, and small items littered the floor.

Another hallway unit had outside stairs stored in it. These stairs were made of wood and in great need of painting.

Bathroom facilities were in need of remodeling. There was evidence of paint peeling from the walls and ceilings. The stalls need a thorough cleaning job, and the gang showers have wood floors.

In the back of the trailer which houses the bathroom, a washer and dryer were stored. They seemed to be of special construction as far as the drum was concerned, evidently for heavy duty washing.

There was one washer and one dryer in the unit, though two washers and two dryers are planned in each.

Recreation facilities were limited. In the area housing these facilities, there was one portable cardtable, and an assortment of chairs, both padded seating and metal folding chairs.

Also in the rec unit was another outside stair, in somewhat better condition than the one found in the hallway unit.

Shelves were provided, evidently for storage.

The individual rooms were in various conditions. Some rooms were in generally good condition except for minor tile and ceiling damage, apparently from water.

Some rooms were in worse condition, however, and would need a major renovation in order to make them liveable. Paint was chipping off the ceiling, a lot of tile was in poor condition, windows were broken, and door jambs and doors needed repairing.

One section of exterior finishing, had been snipped away to reveal the insulation. The insulation visible was damaged, probably from being exposed to weather for some time.

The sheet metal outside finish of the trailers was in poor, dented condition.

According to Tony Wey, Tri-State Mobile Homes Sales representative, the units stored at A-1 Trailer Park will be among those which may be sold to the University. Other units are now at Emerado, N.D.
Notes Little Change

Stevens Muses About Students

Quiet-spoken Dr. O. A. Stevens, Professor Emeritus of Biology, is the only faculty member on campus who has a building named in his honor. He attributes the honor to "the activity of friends."

Stevens Hall contains offices, classrooms and laboratories for the geography, geology, botany and zoology departments. A 480-seat auditorium is also part of the complex.

Although retired from active teaching duties for the past twelve years, Stevens reports daily to his office to conduct research, write and serve in a consulting capacity. Colleagues have noted his enthusiasm for work. He feels that the term really means little. He sees the concept as a sort of myth.

Stevens does not think that student activism is any different from any other activism. "I'm very old-fashioned," he says. "We are all smart enough to do better than we actually do."

That goes for everybody, not just students," Dr. O. A. Stevens said.

"We're all smart enough to do better than we actually do. It goes for everybody, not just students," Dr. O. A. Stevens said.

NOTICE

The NDSU Judo-Karate Club will hold a meeting for new members at 5:30 p.m. Monday in Room 204, Dolve Hall.

A Traffic Appeals Board is being established under the Campus Committee of Faculty Senate in order to hear appeals concerning all campus traffic violations issued by campus police.

Consisting of three students and four staff members, one of whom is chairman and non-voting, the appeals board will meet regularly although meeting times have not been set yet.

Faculty representation will be chosen by the Campus Committee after receiving recommendations from each of the academic deans.

Student representatives will be chosen from candidates submitted to Butch Molm, student president, by interested senators with final appointment made by Molm, with Senate approval.

No appeals will be considered by the board without the fines being paid and the proper form having been filled out at time of payment.

During the course of the appeal hearing, the accused violator may appear along with the officer involved with the case.

When cases are decided in favor of the person accused, refunds of his penalties will be ordered by the board.

Faculty Senate Establishes Appeals Board

Rapid's, Kan., Stevens began at an early age to develop an interest in natural science. He collected many plants, acquiring a small herbarium before finishing high school. Bees, wasps and birds also came under scrutiny during his youth.

After finishing high school, Stevens enrolled at Kansas State College where he pursued his interest in nature. Obtaining a BS degree in 1907, he was appointed an Instructor in Botany at Kansas State.

Passage of the N.D. pure seed law and the establishment of a state seed laboratory brought Stevens to Fargo as Assistant Professor of Botany and Seed Analyst. He held the latter position until 1933.

In 1923, he completed his master of science degree at NDSU and became an associate professor in 1926. Promoted to Professor in 1946, he was awarded the Doctor of Science degree one year later.

Students may be a little more vo-

ciferous though.

born on a small farm near Blue

"We're all smart enough to do better than we actually do — that goes for everybody, not just students," Dr. O. A. Stevens said.

Stevens was named Professor Emeritus and Curator for the North Dakota Institute for Regional Studies. UND awarded him an honorary Doctor of Science degree a year later.

Stevens has had over 200 papers published in leading scientific journals.

His book, Handbook of North Dakota Plants, was published in 1960. It climaxed 40 years of collecting, research and interpretation of the vascular plants of the state.

Recognized as an authority on wasps, bees and plant taxonomy, Stevens has had over 200 papers published in leading scientific journals.

Environment Endangered By Prof.

Blind belief in progress has to be abandoned in the United States before man destroys the stream of life that has been in existence for four billion years, a near-capacity crowd was told here Thursday afternoon.

Dr. Hugh Iltis, professor of biology and curator of the herbarium at the University of Wisconsin, gave a public lecture on "Man and Environment: Foul Nest Abandoned in the United States".

Iltis based his lecture on two main questions: (1) Why does man destroy the stream of life that has been in existence for four billion years, a near-capacity crowd was told here Thursday afternoon.

Iltis showed a number of slides answering his second basic question. He attributes the fall of civilizations to man's destruction of his environment. He cited a recent phenomenon in the geological timeline. Since natural selection does not take place in 2000 years, cities are not a part of man's natural environment. 

In connection with this, Iltis warned that the proposed Kin-dred Dam would destroy 90 per cent of the deciduous forests in North Dakota. He called for the establishment of hundreds of acres of shortgrass national prairie-land parks in North Dakota before the last of that natural environment was destroyed.

In connection with this, Iltis warned that the proposed Kin-dred Dam would destroy 90 per cent of the deciduous forests in North Dakota. He called for the establishment of hundreds of acres of shortgrass national prairie-land parks in North Dakota before the last of that natural environment was destroyed.

According to Iltis, birth control becomes a necessity in a world which has established death control since Louis Pasteur. He reported that the world population will reach eight billion by the year 2000.

The time to face the problems of air pollution, water pollution and earth surface destruction must be now, contended Iltis, before the problems get much worse.

Iltis showed a number of slides answering his second basic question. He attributes the fall of civilizations to man's destruction of his environment. He cited a recent phenomenon in the geological timeline. Since natural selection does not take place in 2000 years, cities are not a part of man's natural environment.

The teaching machines are programmed to follow the lab manual. Audio-visual aids are in each booth. Charts and diagrams are on the walls and are numbered as stations. The tapes instruct the student when and how to use the various aids. The entire lab is programmed on the tapes. 

The teaching machines are the key to giving each student an opportunity to master identical material. Scoby programs the tapes from a single master tape, ensuring uniformity of instruction.

Student reaction was varied. One coed found waiting in line a great time to write letters, but she found that she had writer's cramp by the time she got into lab. One positive outcome is that more students have had their lab manuals read before coming to lab. Scoby feels that the time problem can be solved.
"Of Professional Value"

Business Econ Banquet Defended

by Nancy White

Controversy has arisen in the past over the policy requiring all students taking business economics classes from Dr. Myrold and John Borland to attend the Business Economics Club banquet.

Instructors Myrold and Borland defended the purpose of the banquet attended quarterly by a multitude of defiant business economics students.

As Borland put it, "The major reasons for this banquet are to provide an outstanding lecture to strengthen professional attitudes, to enable students to speak to businessmen from the area, and it is of academic and professional value."

From a student comes, "I've heard that some of the 21-year-old students and numerous others find the bar much more fascinating than the speaker." Myrold's old students and numerous others heard that some of the 21-year-olds are more frequently attacked for the banquet may have served its intended purpose of professional and academic values.

In an effort to upgrade the department, both the banquets and the quizzes are "cut to a learnable level" (a term Myrold's "personal shorthand.")

The latter is the option to those not attending the banquet. This paper is approximately three to five pages long. Depending on the topic, the largest number of majors in this department. All the business ethics, and is to involve about the same length of time as "getting ready and attending the banquet." However, those who attend must outline the report on the banquet. The lowest test grade is dropped, and as A is submitted, all at the cost of $3.50, and a few hours of time.

Myrold also touched upon the death of the Business Economics Club (BEC) quiz sales. In his classes, Myrold orally gives quizzes and A is submitted, all at the cost of $3.50, and a few hours of time.

Several students expressed the view that only those who are business economics will benefit from Dr. Van Sant's long commentary concerning business ethics. Yet if those students profit, they are more frequently attacked for the banquet. Borland re- fused the suggestion of holding the banquet on a voluntary basis.

"The ones we are trying to help are the students who come to a banquet or writing a paper," says Myrold. "We have one of the largest number of majors in this department. All the Joe Zilch's that can't make architecture, pharmacy, engineering or even agriculture, come here. Many are anti-disciplinarian even before they reach us.

"The ones we are trying to help are the students who come to a banquet or writing a paper," says Myrold. "We have one of the largest number of majors in this department. Lussenden Out-Runs Gelling

NDSU bowed to UND Saturday at Edgewood Golf Course in a dual cross country meet 22-33.

Despite a stellar performance by UND's unbeaten Randy Lussenden, the Bison found themselves outmatched. Lussenden beat UND star Arjan Gelling by 35 seconds in the four mile course.

His first place wasn't enough as UND swept the third, fourth, and fifth spots with John Kinne, fifth; Dave Kampa, fourth, and Barry Ault, third. Mark Trittshler was sixth for the Bison and Pete Watson was seventh. Lussenden turned in an outstanding early-season time of 20:21, while Gelling had a 20:56.

"Lussenden is already in mid-season form only two weeks into the current campaign," said Bison Coach Roger Grooters. "He altered his running style slightly during the summer and already has almost equaled his best time of 20:17 of last year."

SU Intramural Schedule Set

A full schedule of 15 touch football games kicked off this year's intramural program. Spattering defenses and rock-hard defenses seemed to be the rule. With the exception of ATO 1 and TKE 1 who our scored their opponents 32-20 and 32-0, respectively, no games were scored more than 12 points.

Intramural football scores for Sept. 15-19 were:
- Bracket 1 — Reed II over SPD by California playoff (CP); SAE I over North High Rise 610, ATO II 12, Stockbridge 0.
- Bracket 2 — North High Rise III over Cores I by CP; Kappa Psi Reed 30; TKE I 32, Farmhouse 28.
- Bracket 3 — Coop 12, SAE II over Johnson I by CP; Sigma Nu 6, Chem Club 0.
- Bracket 4 — AGR over ASCE by forfeit; Theta Chi I 12, John D 6, DU over Churchill by for.
- Bracket 5 — North High Rise I over Cores II 0; ATO I 66, Reed I TKE II over Theta Chi by for.

A game ending in a tie after regulation time is immediately played off. Each team has the possession of the ball for four downs, the team gaining the most yardage is declared the winner.

SU will try to better its 1-2 record on Saturday in the Manitoba Invitational. Bison captain Mick Schroeder has returned after being sidelined with tendinitis for some time. His presence in the Manitoba Invitational will be a welcome asset and should add depth to the squad.

DID YOU KNOW?

The 1968 Bison were the eighth undefeated team in school history... the others were in 1894, 1901, 1902, 1906, 1907, 1925 and 1963.

In 1968 the Bison rushed for 232-2495.

Bowling Team Picked, Great Season Expected

Results of the weekend elimination for positions on the NDSU bowling team indicate that this year's squad should have little trouble equaling last year's second place conference finish.

Varsity bowling coach Wayne Brand was quite pleased with the abundance of talent which turned out for the Saturday morning elimination trials.

"I am convinced," said Brand, "that the high caliber of the top eight performers will place NDSU near the top of the conference. We have a lot of depth this year and it is evident from the results at this point that competition for the 5 berths on the traveling team will be very keen."

The NDSU bowling team is a member of the Central Division of the Midwest Intercollegiate Bowling Conference. This year's team will open the 1969 season Oct. 4 against Northern State College of Aberdeen, S. Dak., in a non-conference challenge match at the NDSU Union.

Scores of the top eight qualifiers are listed below. Totals are for 15 games.

- Todd Baumgartner 2769 243
- Tom Layon 2730 224
- Dave Graham 2729 223
- Ollie Cornelius 2651 211
- John Pietrusinski 2619 220
- Butch Schmidt 2612 196
- Barry Koch 2533 302
- Randy Skaare 2517 233

Head pin's view of Todd Baumgartner, the top bowler in last week's bowling team tryouts. (Photo by Fern)
Once again the Bison relied upon a strong defensive effort early in the game to start them toward their second victory of the season. Last Saturday's game with Northern Michigan was one of the most punishing victories the Bison have attained while stretching their regular season unbeaten string to 20 games.

Sparked by the hard running of Joe Rolle and numerous defensive stands, the Bison forged out to a 21-0 three quarter lead and hung on during a hectic fourth quarter to gain a 28-14 victory.

The defense was placed on the spot early in the first quarter as NMU recovered a fumbled punt on the Bison 34-yard line. From there, the Wildcats pushed the ball to the Bison 4 where, on fourth down, the defense stiffened.

Once ignited, the offense reeled off five straight first downs. Led by Rolle's explosive running, the Bison marched the length of the field with Mjos' 3-yard run climaxing the 6-yard drive.

The remainder of the first half was a defensive struggle, with only Rolle being able to penetrate the NMU line for considerable yardage. Joe finished the half with 78 yards on four carries, after piling up 78 yards on his first four tries. Meanwhile, the Bison defense thwarted two more major drives by NMU with two field goal attempts falling short of the mark.

The second half found the Bison defense equally as formidable, as they continued to contain the Wildcats. Midway through the third quarter, co-captain Stu Helgason recovered a Wildcat fumble on their 38-yard line, and the offense proceeded to march for another touchdown.

In this series of plays it was Tim Mjos and Paul Hatchett, the workhorse, with Hatchett going over from six yards out.

Only moments later, following an NMU punt, the Bison added another touchdown. This drive saw all four members of the backfield sharing the running duties, with a Geranakos - to - Mjos pass covering the final 8 yards of the 63-yard drive.

The hectic fourth quarter saw NMU become the first team to conquer the Bison defense this season, as they struck for two touchdowns, the second coming with 2:43 remaining in the game. With the score 21-14 and the Wildcats in frantic pursuit, Bob Hyland fumbled on their on-side kick-off attempt, and the Bison took advantage.

The 1000th point scored in the NCAA conference.

Some of the standsouts on the Bison defensive unit were Joe Cichy, Stu Helgason and Dick Hanson, Cichy, a defensive safety, was the leader and led all defensive players with 6 unassisted tackles. Helgason led in total tackles with 14, of those being unassisted. Hanson was second in both categories, making 5 unassisted tackles and being in on 8 more.

An estimated 7,900 fans saw action on their own 63-yard line. Using all running plays, the Bison marched 58 yards, with Mjos scoring his third touchdown on an eight yard run. Jim Twardy's fourth straight extra point made the score 28-14, and the Bison had their second victory.

This Saturday afternoon the Bison will once again gain the most significant victory of the season at Dacotah Field. The Indians return 29 lettermen from last year, including 7 starters on both offense and defense. Five transfer players have been added to these 29 lettermen. Omaha had a 4-5-1 record last year, but were the champions of the Central Intercollegiate Conference with a 4-0 mark.

Offensively, the Indians are directed by quarterback Roome Gonnella, a 5-10, 180 pounder who last season passed for 99 completions and 1392 yards. Gonnella was turned for 247 yards, giving him 1548 total offensive yards. Last year Gonnella found a tendency to rush his passes, resulting in 17 interceptions.

Speedy halfback Phil Wise, a converted all-conference defensive performer, and fullback Billy Walker combine with Gonnella to give the Indians a dangerous backfield combination. Gonnella will be throwing to two tailbacks, Rich Bowden and Bob Rollins, to start his senior year of college.

Roller's outstanding performance gives Bison opponents yet another problem in defending the explosive offense. Much of Buffalo's early yardage came on option plays to the right side. Green, with his right tackle position, and Hoffman, as a pulling left guard and trainer Randy Johnsen, an important key to the success of the offense.

Included in this series of plays it was Tim Mjos and Paul Hatchett, the workhorse, with Hatchett going over from six yards out.

At Dacotah Field.

Herd Travels To Omaha

Omaha took some of the pressure off halfbacks Paul Hatchett and Tim Mjos, as they made up his finest performance as a Bison. In rushed for 128 yards in 16 carriers — an average of 8 yards per carry. Included in those 128 yards were 78 yards in his first four carries alone when the Wildcass stormed the Longhorns. Roller also caught two passes and did his usual fine job of blocking.

Roller's outstanding performance gives Bison opponents yet another problem in defending the explosive offense. Much of Buffalo's early yardage came on option plays to the right side. Green, with his right tackle position, and Hoffman, as a pulling left guard and trainer Randy Johnsen, an important key to the success of the offense.
Miller Named Director, Intramurals To Expand

Jim Holm

Carl R. Miller, the new director of physical education, has been named to take over the intramural program.

Miller is a native of LaCrosse, Wis. He received his BS in physical education and biology at Wisconsin State and his Masters in Education degree in administrative leadership, college teaching and physical education at North Texas State at Denton.

"Expansion of the intramural program is my main interest," Miller said, "with the completion this year and to upgrade as possible."

SU's Junior Varsity football team opened its season at Dakota Field Monday night against Concordia's JV team. The Bison JV roster includes two sophomores — Don Siverson and Jeff Shetzer — and 31 freshmen from 5 states. North Dakota high schools produced 20 of those 31 Baby Bison athletes.

From Bismarck High School comes Steve Armstrong, guard-linebacker, twice an All-West pick at middle linebacker and captain of both the football and wrestling teams.

From St. James of Grand Forks come two Baby Bison, both listed as effective-defensive tackles. Phil Meyer was twice selected to the All-East and teammate George Whalen was named to the Grand Forks All-City team.

Minot high schools sent two All-West football players to SJV. JV members are fullback-linebacker Tom Lowe, an All-West defensive end selection who claimed three sacks as defensive end in the heavy weight division. He was undefeated in 20 matches in his senior season. Center Mike Evenson, a Minot Ryan product, was twice named to the All-West football team, twice was the runner-up heavyweight in the state wrestling meet and was state shot put champion in the 1968 track meet.

From Fargo high schools came eight Baby Bison, two each from North and South High, and four from Shanley. Fargo North contributed halfback - defensive halfback Ben Schwartz, an All-West team member at halfback in the 1968 track meet.

Inhabitants of West Court, upon the knowledge of the recently revised campus liquor-law, engaged themselves in what must be termed a night of record consumption. The autumn chill was warmed by a bonfire which was contained in a custom-made brick structure. Approximately 50 people attended the party and amused themselves with circle games, music and conversation filled with choose pieces of inventive.

To all students who attend Bison football games: The streets of North Court are not meant for parking your cars. Please use the lots. And, while we're on the subject, the speed limit on 15th Avenue is 15 mph. Many of the dorm students, and others, have been speeding on that avenue. North Court has a lot of children so slow down, before something happens. I hear that cars have been speeding on the streets of North Court too. I think the limit there is five mph; if it isn't, it should be.

As long as we're on the subject of speeding and speed limits, maybe I should gripe about the lack of speed limit signs on 15th Avenue in the vicinity of West Court and on the streets of North Court. Did you know that the MSA asked that such signs be erected last year, but Buildings and Grounds told them that they were too expensive?

Would you believe that in the last week, West Court has been without water for two days? We run into all kinds of problems when this happens. My neighbor whose wife works, had a little trouble fixing soup for his sons. He finally decided on peanut butter sandwiches, forgetting that peanut butter sandwiches make a mess — even when you have water.

Fifteen minutes after the water went off, one-year-old Brad decided it was time to mess his diaper. His mom heated ice water from the refrigerator to clean him up.

I made coffee out of ice cubes and complained about the fact that the colder the water, the longer the stuff perks. Was it strong? And we couldn't even water it down. After that pot was gone, my husband said to our friend, "I hope you like cream in your coffee, because the colder the water, the longer the stuff perks. Was it strong!"

FOOTBALL GAME
(continued from page 16)
Tom McKernan, an honorable mention All-American last year, has the size at 6’3, 210 pounds to be a top pro prospect. Last season McKernan caught 37 passes for 611 yards. Tight end Stan Standifer, 6’2, 200 pounder, will also provide problems for Bison defensive backs. Last season Stan­
difer caught 29 passes for 455 yards.
Defensively the Indians are very big and experienced in the defensive line. Their front four, all starters last year, weigh in at 224, 260, 215 and 240 pounds. The 215 pounder is Meli Washing­ton, a fierce competitor who last season recorded 60 unassisted tackles. Washington was also the NAIA wrestling champion at 177 pounds in the nation last year.
The last time the Bison played at Omaha was in 1967 when they won a thriller over the Indians 41-23. In that game the Indians' All-American quarterback Martin Irissoe passed for a school record 356 yards and 4 touchdowns. The Bison will be seeking their 21st consecutive regular-season victory.

ANNIVERSARY
of the opening of your
Northport Clothiers Stores: Northport Shopping Center and Holiday Mall Shopping Center.

It’s the First

The talked-about 10 page spread in Playboy Magazine clearly shows why this film is not for everyone.

The title asks a question, and we, the management, in all fairness answer a few questions before you decide to see this film.

1. The language is unabridged. To most, they are not everyday words. To some, they are the only words they live by.
2. Do not see this film if you are easily embarrassed, offended by bold scenes and language, or have a related hang-up.

This is a bold, adult film. The scenes are uncensored. They may shock you. Embrace you.

X is the rating of this film and if you are under 18, you cannot and will not be admitted to this theatre.

Now that we have answered the questions we feel you might ask, find out for yourself.

"Can Heironymus Merkin ever forget Mercy Humphre and find true happiness?"

Concordia College
Stop In Soon, We’ll Be Happy To Meet You.
YAF Conclave Wrought With Dissent

St. Louis — (CPS) — Over one thousand members of the conservative Young Americans for Freedom crowded St. Louis’ Riverfront Convention Center in an attempt to coordinate anti-New Left activities for the coming year.

But things weren’t as quiet in last month’s convention as those of conveners, libertarians and anarchist caucuses tried to take over the reins from the tightly knit traditional leadership.

YAF’s “liberals,” however, found themselves in the same position that McCarthy supporters were in at last summer’s Democratic National Convention. They were locked out of delegate positions and in many cases kicked off the side in alternative or “non-voting” member status.

Many delegations were purged of liberal members. National Secretary Michael Thompson was accused of packing his own home state delegation. A leading Missouri supporter said that he and other libertarian members had been purged by Thompson even though they had sent in checks in advance. Thompson denied that anyone had been purged and said that any applications in which members failed to meet delegate’s requirements were rejected.

The biggest fight came in the Pennsylvania delegation. While the national organization had recommended that the convention be held in the exclusive Stouffers’ Riverfront Inn in their attempt “non-voting” member status. This was resisted and a convention of YAF members was held at the convention center itself.

Purging was a key issue in the convention. Previous YAF policies called for purging the state chairmen and the national board members and the national board has called for purging the state chairmen.

One major theme of the convention was that YAF should take legal action to stop campus disorders. YAF leaders William Frank, legal advisor to the New York chapter, held a press conference to release YAF’s new plan to use university officials and the draft to close classes. Frank cited cases where classes had been closed in the college catalogue catalogue and the university. He said that groups of students can obtain tuition rebates if a school is closed.

In response to a question, he reluctantly agreed that the same passport which was used by students to gain rebates on tuition fees in California and on campus in New York should be used by groups of students to obtain tuition rebates if a school is closed.

Despite all the talking on the subject of legal actions, no concrete plan of action was announced. YAF did, in a resolution, warn college administrators that unless they provide protection for enrollees students and qualified recruiters that YAF will henceforth protect their presence.

“T’il be up to us as a member of the government and the courts,” said one YAF member who no longer has the right to hold the same passport which was used by students to gain rebates on tuition fees in California and on campus in New York.

The case has begun to reach the ears of the public. At a concert in Washington this month, Peter Yarrow of the Peter, Paul and Mary group dedicated the song “The Great Mandella,” an anti-military song, to Priest and commented that “this man exemplifies what we’re trying to say in the song.”

This kind of thing just has to be stopped.

Soldier Faces Court Martial For Underground Newspaper

WASHINGTON — (CPS) — Roger Lee Priest, 25, a native Texan, is the main character in a much-publicized case involving the Navy, the D.C. Department of Sanitation, and those organizations which attempt to bring public indignation to bear on cases involving freedom of speech and press.

He faces a possible 33-year sentence for publishing an anti-Communist newsletter.

Priest began the publication last April (while stationed at the Pentagon). His newsletter is called OM — THE SERVICEMAN’S NEWSLETTER, a military anti-war, anti-Communist publication. While the head of the sanitation department made a special purge of trash at Priest’s Washington apartment, a letter from the printer’s union was introduced as evidence in the investigation.

While the head of the sanitation department, William Roeder, acknowledged such correspondence with police, a subsequent call by the mayor for an investigation brought a denial of his original statement from Roeder.

The case has begun to reach the ears of the public. At a concert in Washington this month, Peter Yarrow of the Peter, Paul and Mary group dedicated the song “The Great Mandella,” an anti-military song, to Priest and commented that “this man exemplifies what we’re trying to say in the song.”

This kind of thing just has to be stopped.

SDS Films

Students for a Democratic Society (SDS) is sponsoring three revolutionary films at 4:30 p.m. today in all of the Union.

Included among the films is Hanoi 12, made by several avant-garde Cuban film makers. The film has won several awards.

Unlike the anti-war movement, young people in the “true” left are working together. From Maryland to Texas, new campuses are being formed. Symbols of this movement are the bumper stickers. The same symbols are on the bumper stickers. The same symbols are on the bumper stickers.
