

## INTERGENERATIONAL URBAN RENEWAL

Renewing the urban fabric through the development and integration of intergenerational living communities. Across the United States there are cities and towns that have been crippled with rundown and abandoned buildings or lots around their downtown district. Often, nothing is done to fix this problem which leads to these prime sites being avoided. Additionally, these sites negatively affect the local economy, environment, equity, and the safety of the general public. Moving forward it is important for our cities and country to focus on urban infill and redevelopment projects instead of continuing the suburban sprawl. Architecture plays a pivotal role in achieving the extent of influence these projects will HAVE ON THE REVIVAL OF THE URBAN FABRIC.

This thesis seeks to find an architectural solution to how an urban redevelopment project can revitalize an area of a downtown district to the rest of the city through creating a neighborhood within a dense urban environment through the development and integration of intergenerational living. This urban redevelopment project consists of the removal of deteriorating buildings and the vacant land around them. This site will be replaced with a mixed-use BUILDING AND A LANDSCAPE THAT RECONNECTS THE CITY BACK TO THE SITE AND ADJACENT WATERWAYS. A CATALYSIS FOR SUSTAINABLE URBAN REVIVAL WILL BE FORMED FROM THIS ARCHITECTURAL FRAMEWORK.

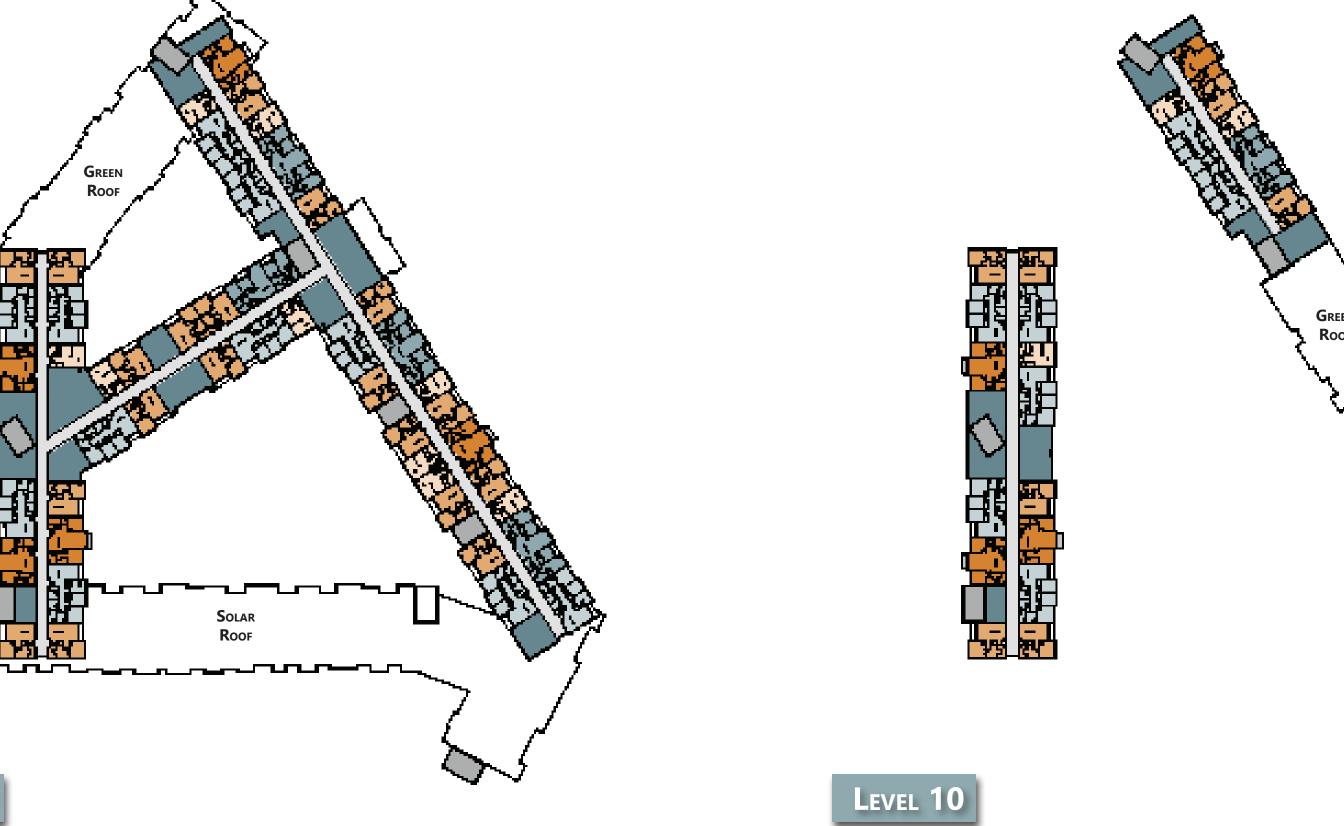

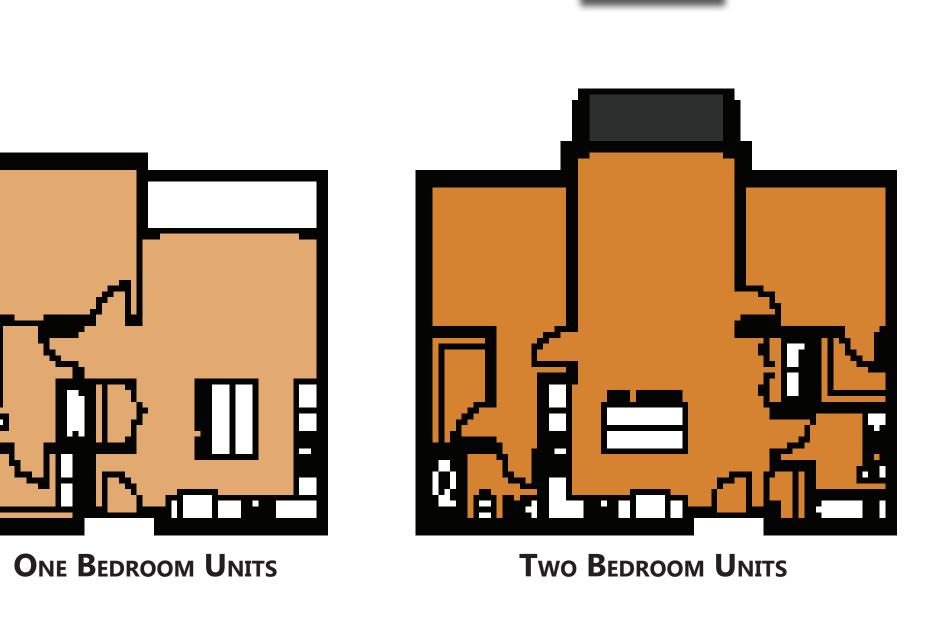

STUDIO UNITS

TYPICALLY RELATED AND LIVE WITHIN THE SAME LIVING UNIT.

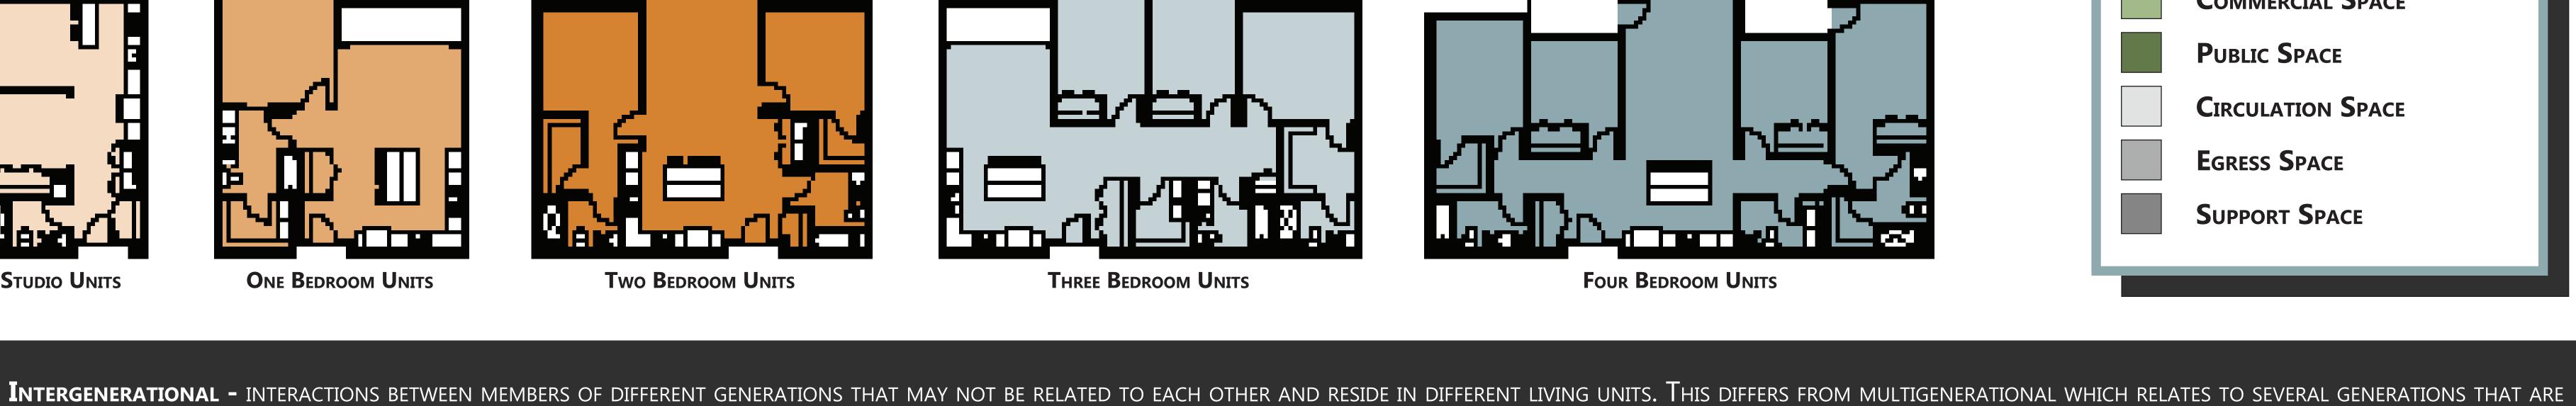

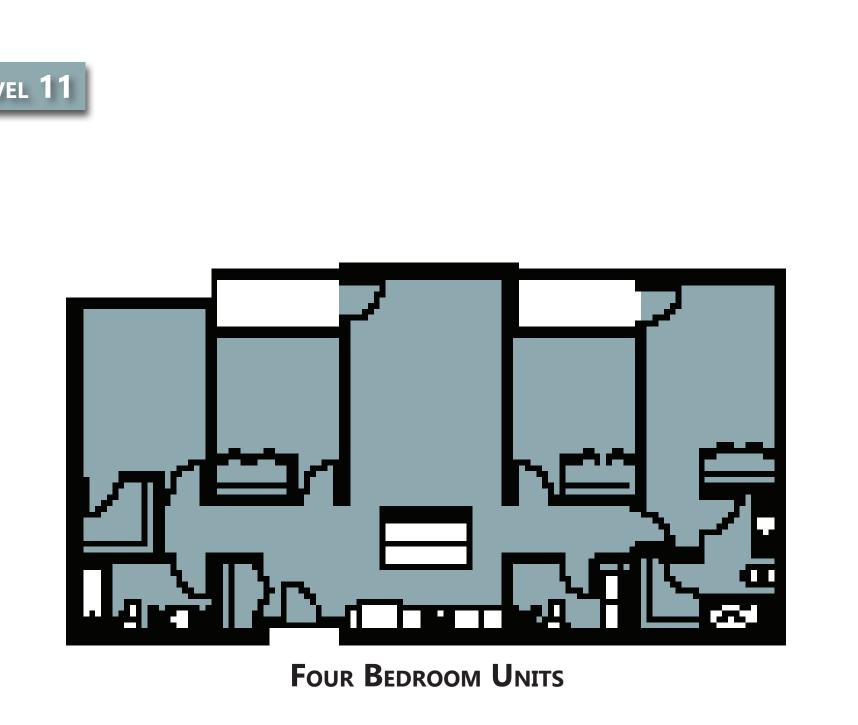

Urban Renewal - is the clearing out of blighted areas in inner cities to clear out slums and create opportunities for improved housing, business growth, and more.
