1996 Weed supervisors and the new utility

ERIC RICHARDSON

R. M. of Dauphin

Using a holistic approach to controlling noxious weeds, we have incorporated the use of insects at bio-release sites.

The guide post to a site's success requires semi-annual avoits at the first point of release.

A GPS receiver lends itself cheaply and accurately to this end; within minutes a GPS can establish the position of a release site. The same point can be re-established repeatedly so bio-sites can be precisely monitored.
