Mixing Instructions:

A.P.P.L.E.S.

Agitate

Powders soluble

Powders dry

Liquid flowables and suspensions

Emulsiifiable concentrates

Solutions.

Some herbicide labels list a specific mixing sequence. In absence of specific directions, the recommended sequence for adding pesticide formulations to a tank partially filled with water follows the A.P.P.L.E.S. method.

Each ingredient must be uniformly mixed before adding the next component, e.g., a soluble powder must be completely dissolved before adding the next component. Adjuvants are added in the same sequence as pesticides, e.g., ammonium sulfate is a soluble powder, petroleum oil and MSO (methylated seed oil) are emulsifiable concentrates; and most surfactants are solutions. Within each group, usually add the pesticide before the adjuvant, e.g., a soluble-powder pesticide before ammonium sulfate.

Backpack Sprayer Calibration

No-Math Version:

- Step 1. Mark a calibration plot 18.5 foot wide X 18.5 feet long.
 Step 2. Spray the plot uniformly with water while recording the number of seconds required to spray the plot.
 Step 3. Spray into a bucket for the same number of seconds.
 Step 4. Measure the collected volume of water in ounces.
 Step 5. The number of ounces collected equals the number of gallons per acre the sprayer is delivering.

Hand-held Sprayers:

Hand-held sprayers are used for spot treating weeds or small areas. Spray coverage should be uniform and the foliage of target plants should be wet but the amount of spray solution applied should be limited so that run-off does not occur.

Hand-held sprayers should be calibrated by:

- 1) spraying a known area using water following a standard, reproducible procedure
- 2) measuring the amount of water applied
- 3) calculating gallons per acre (gpa).

For example, 0.75 gallon on 500 sq ft is the same as 65 gallons per acre: 43,560 sq ft per acre / 500 sq ft x 0.75 gallon = 65 gpa. The desired rate in lb/A or pt/A can be used to calculate the amount of herbicide to add to the spray solution. If 3 pt/A is desired: $3 \text{ pt/A} / 65 \text{ gpa} = 0.046 \text{ pt}$ or 0.73 fl oz or 1.5 tbsp/gal of spray solution (16 fl oz = 1 pt, 2 Tbsp = 1 fl oz).

When calibration of a hand-held sprayer is not possible and the herbicide being used is safe to the environment and non-target plants, a volume of 50 to 70 gpa can be assumed. However, the actual volume applied can vary considerably with the type of sprayer, spray pressure, and technique of the applicator, so calibration is strongly encouraged.

Some herbicide labels specify a percent solution for use in hand-held sprayers. The following chart provides mixing instructions to obtain solutions of varying percent concentrations on a volume/volume basis:

Desired solution volume	% concentration of herbicide				
	0.5	1.0	1.5	2.0	5.0
gallons	Amount of herbicide to add, fl oz				
1	0.6	1.3	1.9	2.6	6.4
2	1.3	2.6	3.8	5.2	12.8
5	3.2	6.4	9.6	12.8	32.0
10	6.4	12.8	19.2	25.6	64.0
100	64.0	128.0	192.0	256.0	640.0
1 pt = 16 fl oz	16 Tbls = 1 cup				
1 Tbls = 3 tsp	1 fl oz = 30 mls				
1 Tbls = 15 ml	1 fl oz = 2 Tbls				

Sprayer Cleaning Solutions For Herbicides:

Water: Command, Extreme, glyphosate, Lightning, Raptor.

Ammonia or commercial tank cleaner + water:

2,4-D, Accent, Amber, Amplify, Assure II, Basagran, Beacon, Buctril + Atra, bromoxynil, Cadet, Callisto, Cimarron/Xtra, chlorsulfuron, Classic, clethodim, clopyralid, Cobra, dicamba, Dual/II/Magnum, Extreme, FirstRate, Fusilade DX, Fusion, Gramoxone, Harness, Harmony Extra XP, Hornet WDG, Lasso, Lightning, metolachlor, metsulfuron, Moxy, Moxynil, Northstar, Option, paraquat, Peak, Permit, Prowl, Pursuit, Pursuit Plus, Python, Raptor, Reflex, Resolve, Resource, Select, Steadfast, Stinger, Surpass, Targa, thifensulfuron, Treflan, trifluralin, and Ultra Blazer.

Detergent or commercial tank cleaner + water:

Aim, atrazine, Clarity, Distinct, Flexstar, Ignite, Marksman, metribuzin, Liberty, Poast, Poast Plus, Shotgun, Status, Ultra Blazer, Yukon.

Herbicide Storage Temperatures:

Herbicides may be exposed to freezing temperatures in storage. The following information gives the minimum storage temperature to avoid risk of reduced herbicide activity.

No storage temperature restriction

acetochlor, Aim, Authority MTZ, Axial XL, Balance Pro, clethodim, dicamba, Discover NG, EPTC, Extreme, glyphosate-K, Impact, metolachlor, Laudis, Outlook, Rage D-Tech, Status, Touchdown, Valor, and **most dry formulated herbicides in DF or WDG formulations.**

May store below freezing but warm before using

2,4-D amine, 2,4-D ester, atrazine 4L, Betamix, Betanex, Dual Magnum, MCPA amine and ester, Tordon, Weedmaster.

Do not store below 40 F

Assert, Authority First, clopyralid + 2,4-D, Flexstar, Extreme, LI-700, Prowl, Pursuit Plus, Sonalan, Spartan 4F, trifluralin.

Do not store below 32 F

Assure II, Basagran, Beyond, bromoxynil + MCPA, ClearMax, clopyralid, Far-Go EC, Flexstar, Fusilade DX, Fusion, Goal, Grazone P+D, Hyvar, Ignite 280, Liberty, Lorox DF, Nortron SC, paraquat, Poast, Pramitol, Progress, Prowl H2O, Puma, Pursuit, Quest, Raptor, Redeem, Reflex, Reglone, Remedy, Resource, Select Max, Stinger, Thistrol, Ultra Blazer.

Do not store below 20 F

Define, Fusilade DX, Plateau, Milestone, Ro-Neet, Starane NXT, Weedar 64

Do not store below 10 F

Amitrole T, Arsenal, clopyralid + MCPA, Crossbow, Fusion, glyphosate, Rodeo, Roundup, Starane, WideMatch.

Do not store below 3 F

bromoxynil, bromoxynil + atrazine, Discover, Huskie, Shotgun.

Do not store below -10 F

Callisto, Halex GT, Lumax, Spartan Advance

*Edible legumes = chickpea (garbanzo bean) and lentils.

NCS = Next cropping season after herbicide application.

2CS = Second cropping season after herbicide application.

MAA = months after application.

Field Bioassay Instructions - Refer to label or paragraph Y6 in the narrative section.

- a** Soil pH <7.5 = 10 MAA for sorghum and 11 MAA for sunflower.
Soil pH >7.5 = 18 MAA for sorghum and sunflower
Soil pH <6.5 = 10 MAA for sugarbeet and all other crops not listed.
Soil pH >6.5 = 18 MAA for sugarbeet, potato, and all other crops not listed and cumulative precipitation in the 18 MAA period must exceed 28 inches.
- B or b** = Bioassay. Do not plant until field bioassay indicates it is safe. Crop rotation after atrazine is rate and soil pH dependant.
Python, Hornet, and SureStart require a 26 month rotation and a successful field bioassay.
FirstRate requires a 30 month rotation and a successful field bioassay.
Lightning, Pursuit, and Pursuit Plus requires a 40 month rotation and a successful field bioassay.
- c** Do not use on soil with pH greater than 7.9. Barley and oat can be planted 6 months after application west of highway 83.

- d** Requires soil pH of 7.9 or less and a 34 month minimum rotation interval and 28 inches of cumulative precipitation.
- e** Requires soil pH of 7.9 or less, 22 months and 22 inches of precipitation west of Hwy 1 or 34 months and 34 inches of precipitation east of Hwy 1. These restrictions also apply to Ally Extra at rates greater than 0.2 oz DF/A.
- f** Clearfield (imidazolinone resistant) canola varieties may be planted the season after application. Conventional canola varieties may be planted the following season after application at 1 pt/A in ND counties of Cavalier, Pembina, Ramsey, Rolette, Towner, and Walsh and MN counties of Kittson, Marshall, Pennington, Red Lake, and Roseau.
- h** Any rotational crop may be planted 120 days following application of dicamba at 1.5 pt/A or less, excluding days when ground is frozen. For all crops and rates greater than 1.5 pt/A allow 45 days per 1 pt/A of dicamba used excluding days when ground is frozen.
- j** Requires 15 inches of cumulative precipitation during the growing season following application. An 18 month restriction applies to Accent, Resolve, and Steadfast applied above rates indicated or if drought follows application. Refer to label for crop rotation restrictions if rates greater than those indicated are used.
- k** Requires 24 inches of accumulated precipitation.
- m** Do not plant dry bean, dry pea, soybean or sunflower for 18 months on soil with less than 2% OM and rainfall less than 15 inches during the 12 MAA OR may be planted 12 MAA if risk of injury is acceptable. Perform a field bioassay prior to planting for areas that receive less than 15 inches of rainfall and have less than 2% OM. Do not plant lentil, potato or any other broadleaf crop grown for seed for 18 months unless risk of injury is acceptable.
- p** Barley can be planted 9 months after application in Cass, Grand Forks, Pembina, Towner, Traill, and Walsh counties of ND. In all other counties of ND allow an 18 month rotation restriction before planting barley.
- r** Do not apply Beacon, NorthStar, Peak, or Spirit in the Red River Valley of ND and MN or on soil with pH greater than 7.8. User must follow crop rotation restrictions as given on labels. Refer to label for additional information on soil pH, rotation intervals, maximum use rates, application timing and other restrictions. The number of months after application given in the previous table are applicable only on soil with a pH less than 7.8, only using less than maximum rates allowed, only using approved application timings, and only on approved locations (inside or outside Red River Valley) as indicated on the label. Do not replant to any broadleaf crop if less than 10 inches of precipitation has occurred since Peak application. For situations not covered on the label or in the previous table, conduct a soil bioassay to determine if Peak soil residue will allow successful planting of desired rotational crop.
- s** Corn can be planted only if Prowl EC / Prowl H20 is applied PRE. DO NOT APPLY PPI.
- t**
 - Rotation to barley is: 9 months east of Hwy 83 and 18 months west of Hwy 83.
 - Rotation to potato is: 9 months if soil pH is >6.2 and rainfall is >18 inches/year or
18 months if soil pH is <6.2 and rainfall is < 18 inches/year
 - Rotation to sugarbeet: 18 months if soil pH is >6.2 or
26 months if soil pH is less than 6.2.
- u** Must add 2 months if soil pH is 7.5 or above. Wheat and barley can be planted 4 MAA following lentil or soybean.
- w** CRP grasses may be planted 13 MAA under the following conditions:
 1. By label this is deemed as a non-standard rotation.
 2. Dow assumes no liability for injury.
 3. Fall is recommended as the best time to plant CRP grasses.
 4. A field bioassay is recommended prior to planting CRP grasses.
- x** Do not plant corn or sorghum until soil samples analyzed for Tordon residue indicates no detectable levels present. Restriction is based on non-legal herbicide residue that may be found in corn and sorghum and not on crop safety.
- y** Oats, sorghum, and annual or perennial grass crops may be planted at least 12 MAA in areas that received 20 inches or more of precipitation during the growing season. CRP grasses may be planted 18 MAA if trifluralin is spring-applied or 21 MAA if fall-applied.
- z** For rotation to field pea in 10.5 months, precipitation must be greater than 7 inches during the 10.5 months following application and greater than 5.5 inches of precipitation from June 1 to August 31 following application. Otherwise allow 18 months.

Laboratories That Analyze For Pesticide Residue in soil, water, and plant samples.

For links to labs in each state see AGLABS website:
<http://aglabs.sdstate.org>

For specific category testing of labs see:
<http://www.findtesting.com>

The following list shows laboratories that can analyze for pesticide residues:

A & L Great Lakes Lab
 3505 Conestoga Drive, Fort Wayne, IN 46808
 (219) 483-4759, <http://www.algreatlakes.com>

Agvise Laboratories
 Northwood, ND
 (701) 587-6010, johnlee@polarcomm.com

Analytical Laboratory
 McCall Hall, PO Box 173620
 Montana State University, Bozeman, MT 59717
 406 994-3383, Heidi Hickes
 Developed the most sensitive test available for Oust.

Animal Disease Lab,
 9732 Shattuc Road, Centralia, IL 62801-5858
 (618) 532-6701,
<http://agr.state.il.us/animalHW/labs/centralialab.html>

APT Labs Inc.
 1050 Spring Str., Wyomissing, PA 19610
 610 375-3888

Harris Laboratories
 621 Rose Street, P.O. Box 80837, Lincoln, NE 68501
 (402) 476-2811, <http://www.mdsharris.com>

Hazelton Environmental Services
 525 Science Drive, Madison, WI 53711
 (608) 232-3300

Midwest Laboratories
 13611 B Street, Omaha, NE 68144
 (402) 334-7770, <http://www.midwestlabs.com>

Minnesota Valley Testing Laboratories, Inc.,
 326 Center Street, New Ulm, MN 56073
 (507) 354-8517, (800) 782-3557

Minnesota Valley Testing Laboratories, Inc.,
 1411 South 12th Street, Bismarck, ND 58504
 (701) 258-9720, (800) 782-3557

Olson Biochem Labs, Duane Matthees
 South Dakota State University
 Office = 134 ASC, Brookings, SD 57007-1217
 Samples = 152 ASC, Brookings, SD 57007-1217
 Office = (605) 688-6160, Lab = (605) 688-6171
duane.matthees@sdstate.edu, <http://anserv.sdstate.edu>

Professional Service Industries
 4820 West 15th Street, Lawrence, KS 66049
 (800) 548-7901

General Guidelines for Laboratory Analysis: Safe Level*

Herbicide	Parts per billion (ppb)	Parts per million (ppm)	Crop
chlorimuron	1-3	0.001-0.003	Corn
	2-5	0.002-0.005	Wheat
clomazone	75-150	0.075-0.15	Corn
	15-75	0.015-0.075	Wheat/Alfalfa
Dintroaniline	100-200	0.1-0.2	Corn
	200-300	0.2-0.3	Wheat
	50-70	0.05-0.07	Sugarbeet
Imazethapyr	1-25	0.01-0.025	Corn
	4-10	0.004-0.01	Sorghum
	<1	<0.001	Sugarbeet
Triazine	100-250	0.1-0.25	Soybean
	40-100	0.04-0.1	Alfalfa
	60-150	0.06-0.15	Oat
	75-180	0.075-0.18	Wheat
	<5	<0.005	Sugarbeet

*"Safe" values for herbicide residues differ by soil type and pH because of differences in availability in soil. Low-range values are for coarse textured soils with low levels of organic matter, higher values are for fine textured soils with high organic matter. 1 ppm = 1,000 ppb

"Safe" Triazine Residue Level		
3 inch sample (No-till)	6 inch sample (moldboard plow)	Crop
<0.17 ppm	<0.08 ppm	Oat, alfalfa
0.17 to 0.35 ppm	0.08 to 0.17 ppm	Soybean
>0.35 ppm	>0.17 ppm	Corn
