$$^a\text{Growing Degree Day Units} = \frac{(\text{Maximum Day Temperature} + \text{Minimum Day Temperature}) - 32}{2}$$

Herbicide

* Herbicide may have different application timings for individual crops. Use specific label information for individual crops.

** The addition of MCPA or bromoxynil does not restrict application timing. The addition of 2,4-D generally restricts the earliest application to the 4-leaf stage. The addition of dicamba generally restricts application to the 2- to 4-leaf stage.

Remember to always follow the label — it's the law!
