

# HERBICIDES REGISTERED ON SMALL ACREAGE CROPS IN NORTH DAKOTA

The following chart is only an aid to identify registered herbicides on the following crops. Not all labels of similar active ingredients cover identical crops. Not all formulations are registered in the state of North Dakota. Refer to the ND Dept of Ag web site for formulations registered in the state. Many products require specific application instructions and not all formulations can be used in-crop with adequate crop tolerance. For example, glyphosate is registered on most crops listed as a PRE or directed application between rows but glyphosate applied POST on crop foliage will kill crop plants. Refer to pages 122 to 128 for additional information on products listed. User must follow label directions. Refer to label of specific product:

1. To determine what crops are registered.

2. For application instructions.

3. For all other restrictions and use information.
