Postemergence herbicide application timing to HRS, durum and barley from emergence

1 Herbicide may have different application timings for individual crops. Use specific label information for individual crops.

2 The addition of MCPA or bromoxynil does not restrict application timing. The addition of 2,4-D generally restricts the earliest application to the 4-leaf stage. The addition of dicamba generally restricts application to the 2- to 4-leaf stage.

* or generic equivalent

Remember to always follow the label — it’s the law!
